WOMEN'S INSTITUTE

Social Convenor, Mrs. Roy Millard, with a surprise in the person of a darkly colored young man, with recitations and songs, entertained the members of the Women's Institute at their regular meeting held at the home of Mrs. J. Roberts, on Saturday, January 6th. Mrs. R. Watson won a memory contest and was rewarded with a prize of a nice bon-bon dish. Presentations were made to the retiring President, Mrs. T. Roberts, and the secretary, Mrs. D. Thompson, and also a hearty vote of thanks tendered the former social convenor, Mrs. A. Jenkins for their devoted interest in the work of the Institute.

A letter of much interest from Dr. G. M. Little, regarding the physical condition of rural school children in the Red Deer Full-Time Health District; Presented the following figures:

Total examinations	1892
Males	1028
Female	864
Number defective	1633
Number without defects	259
Number of defects	2885
Number of corrections	664
Defective eyes	15
Defective vision	256
Defective ears	11
Defective hearing	73
Defective nose	31
Defective teeth	1046
Defective tonsils	708
Defective speech	4
Defective nutrition (underweight)	588
Defective skin	12
Defective Heart	51
Defective Lungs	22
Defective Bones	7
Defective thyroid (goitre)	227
Other Defects	87

Dr. Little States:—

In spite of the many corrections of defects which we found since our examination two years ago, the number of defects still found among our children is perturbing. We can surely agree that parents would not allow these defects to remain if it were within their power to have them remedied. The problem, then, reduces itself to putting the necessary care for the children within reach of parents, and this problem will, I believe, be worked out when Women's Organizations put a concerted effort and thought into the task of solving it.

OLDS WINS 8-3

In a fast clean game before a large crowd of fans, Olds defeated the local team on Saturday night by the score of 8 to 3.

Though the score does appear pretty lob-sided it is no indication of the play, as the Lacombe team had many tough breaks, while on the other hand Shattler got several real breaks. At all times in Saturday night's game our players played hard, but in the last period our boys seemed to tire and could not hold the pace they set in the previous periods. It was a nice game to watch and all fans were satisfied.

PUT AWAY YOUR CAR OR GET YOUR LICENSE

The Alberta Government has decided that it will not accede to the request of thousands of motorists and alter the Auto License year to April 1st. It has announced, however, that a discount of 20 per cent. will be allowed on licenses not taken out until April 1st. This does not mean you may operate your car until April 1st on a 1933 licence; if you are going to operate it you must have a licence now, or run the chance of being hailed into court and finded. As In the past, when taking advantage of the 20 percent. discount in April, owners will be required to take affidavit that their cars have not been operated in the meantime.

By their action the government is going to lose a lot of revenue as only those who have good reason to operate during the next three months will take our licences. The loss to the government in gasoline tax will amount to a very considerable amount.

UNITED Y.P.S.

Officers elected for the ensuing year, at the regular meeting of the United Young People, held Sunday evening, are as follows: President, A. MacPherson; Vice-President, Geo. England; Secretary, Kae Newton; Group Leaders, Jessie Hay, Elizabeth Layton, K. Todd, S. Wyth and T. Carruthers.

Since organizing last Fall, the Young People's Society, has enlisted the interest of many of the church young people, and now comprising a membership of about fifty.

USE GOVERNMENT CAR TO PEDDLE MOONSHINE

Edmonton: Edmonton bootleggers are plying a big trade, according to evidence produced in city police court Saturday by Corp. J. A. Cameron, of the R.C.M.P.

One person, who was an unwilling "partner" to the operations here, was in city police court on Saturday.

"This man was the victim of others who are selling illegal liquor," Corp. Cameron told the court. He indicated further prosecutions would follow soon and that at least one other party was using a truck for the transportation of the liquor into the city. The truck is the property of the dominion government.

BAPTIST CHURCH

Sunday School at 11. B. S. Cameron.

Junior B.Y.P.U. at 6:15. Miss Phillis Lee ,Director. An interesting story "Stealing an elder Brother's Birthright by Craft," will be told by Rev. Isler.

The evening Sermon at 7:30 "Give God a Chance This Year," will give you food for thought.

Senior Young People's Society Monday evening at 8. Miss Helen Cameron, President.

Thursday at 8 p.m. Bible Study and Prayer Meeting.

WANTED

ONE GOOD MAN

Living in Vegreville, Preferably 30 - 45 years of age, married, some sales experience. Not bankrupt in ambition. We train you at our expense. Permanent vocation with real future. Reply treated confidentially.

ALBERTA NEWS BULLETIN

Further Extension Tax Payment

Owing to the continued heavy snow conditions in country districts and consequent difficult travel on roads, the provincial government has announced a further extension on payments of dues under tax consolidation agreements until January 31. This gives six week's extension from the original date of December 15.

Alberta Women Honoured

Two Alberta women were among those honored by King George on New Year's Day, with membership in the Order of the British Empire. These were Miss A. Tilley, for many years head of the nursing mission in Lethbridge, and Miss E. Pearson, Superintendent of the Municipal Hospital at Grande Prairie.

Unemployment Figures

Unemployed in the province at the end of December, according to figures of registration at the Alberta employment bureau, totalled 10,698.

Dairy Products 1933

The outstanding feature of the production statement for the past year will be the record made in dairy products. The total value of these for 1933 will show almost a million dollars increase over 1932. The preliminary estimates of the manufacture of creamery butter shows that the 96 creameries in the province have turned out about 23,750,000 lbs. or 800,000 lbs. more than the previous high record, thus setting a new high record for all time in the history of the the province. The price is about a cent a pound better than that of 1932, which, with the increased production, has added about $800,000 to the value over 1932. The eleven cheese factories operating in the province have produced about 1,435,000 lbs. of cheese, approximately the same as the year before. Another interesting statement in this connection is the estimate of butterfat in cream graded during the 11 months ending December 3rd. Of the total of 19,000,000 lbs. of butterfat, about 66 percent was graded as special, compared with but 58 percent. in 1932, and the price was about a cent a pound better. In addition, 28 percent. of the butterfat was in the first grade.

Provincial Seed Fair

Preparations are now being made for the annual provincial seed fair which will be held this year in Calgary, from February 14 to 17 inclusive, under the direction of the provincial field crops branch. Approximately $2000 will be given in prizes and some 900 exhibits of seed grains and grasses are expected. The class for new exhibitors, which was inaugurated two years ago will be continued. The classes for junior club members will again be a feature, more than 500 samples being given to the minor crops division, particularly to forage crops and to garden and canning peas. Eight classes are provided in corn, in which the prizes total about $300. A championship of $25 in oats is being offered by the Peace River Co-operative Association, and a championship prize in malting barley is being offered by the Canada Malting Co.

MARRIED

At the home of Mrs. Moss, Blackfalds, on Dec. 27th, Roy Miller, son of Mr. and Mrs. Fred Miller, Blackfalds, to Doris Moss, daughter of Mrs. Fred A. Moss, Blackfalds, by Rev. R. B. Layton.

At the Manse, Lacombe, on Jan. 5th, John O. Todd of Flatbrush, Alta. to Mrs. Mary Maud McLean of Lacombe, by Rev. R. B. Layton.

74 BELOW ZERO RECORDED AT TELEGRAPH CREEK

Residents of Telegraph Creek and other outposts in the Atlin district, B.C.'s northernmost constituency have just come through the coldest weather in the history of the oldest inhabitants.

With Provincial Police reporting many thermometers registering 74 degrees below zero, the lowest point on the instruments, old timers claim they experienced temperatures of from 90 degrees to more than 100 degrees below zero during the past week.

ANNUAL MEETING OF PARISHIONERS

The Fortieth Annual Meeting of the Parish of St. Cyprian, Lacombe, was held at the Adelphi Hotel on the evening of Thursday, January 4th, with a comparatively small, but nevertheless enthusiastic number of Church Members in attendance.

Splendidly prepared Balance Sheets and Reports were presented by the Church proper, together with its various Organizations, such as: Little Helpers, Sunday School, Junior Women's Auxiliary, Senior W.A., and Young Women's Guild; in addition to the Reports of several Parochial Standing Committees, such as: Religious Education, Church Property, Finance, Service Arrangements and Clergy Transportation; the first-named easily surpassing all others both in quantity and quality of its work. All Departments of the Church were able to show that all current [illegible] Debts had been met in full; and [illegible] and all had ended the year with a small surplus.

One other Report, that of the Rector, should not be quite overlooked. A Special Committee, appointed by the Rector, retired from the meeting to go into it thoroughly and to bring back a condensed report on it. This Special Committee consisted of the following, namely: Mr. A. T. Inskip, (C) and J. Sowerby; together with Mesdames Sansbury and Parsons and Miss Alice Inskip.

The Election of Officers resulted as follows:

Church Wardens: Messrs. R. L. Robson, (re-appointed by the Rector) and F. V. Parsons, (re-elected by the Parishioners.)

Vestrymen: Messrs. A. T. Inskip, C. E. O. Burden, H. L. Pearce, H. A. Brownlow (Bentley); and R. E. K. Warren, (Blackfalds) (re-elected); together with Mr. W. R. Gilks, Mrs. A. R. Sansbury and Miss Alice Inskip; the two last-named being elected for the purpose of rendering special assistance to the Wardens and Vestrymen.

Sunday School Superintendent: Mrs. J. N. Glasgow, (re-elected).

Secretary-Treasurer: Miss R. J. Graydon, (re-elected).

Lay Delegates to Synod: Messrs. F. V. Parsons and Charles Sansbury.

Substitutes: Messrs. H. L. Pearce and R. L. Robson.

Auditors: Messrs. W. Ritson and J. Sowerby, (re-elected).

The personnel of the various Standing Committees of the Parish remains practically unchanged.

Immediately after the conclusion of the meeting, a delightful "Social Hour" was spent, the assembly being regaled with delicious refreshments which had been, for the greater part, provided by Mr. A. T. Inskip, the genial proprietor of the hotel.

GREEN FEED FOR SALE

Apply to Frank Bowtell, Lacombe.

ORDER EASTERN STAR INSTAL NEW OFFICERS

The installation of officers of Alexandra Chapter No. 4, O.E.S. was held in the Masonic Hall on Dec. 26. Mrs. Cranna, Worthy Installing officer, was assisted by Mrs. Elizabeth Nelles and Mrs. Margaret Mann as Marshall and Mrs. Olive Gilmour as Organist.

The new officers are,

Worthy Matron	Sis. Jenkins
Worthy Patron	Bro. Cranna
Associate Matron	Sis. Frizzell
Associate Patron	Bro. Craigen
Secretary	Sis. Thompson
Treasurer	Sis. Ramsay
Conductress	Sis Rankin
Associate Conductress	Sis. Nelles
Chaplain	Sis. Ross
Marshal	Sis Marshall
Organist	Sis. Tracy
Adah	Sis. Douglas
Ruth	Sis. Hewitt
Esther	Sis. Preston
Martha	Sis. J. MacKenzie
Electa	Sis. Smith
Warder	Sis. Langrock
Sentinel	Bro. Smith

After the installation the members retired to the banquet room where a dainty lunch was served by the Past Matrons.

AT THE AVALON

"20,000 Years in Sing Sing"

Warden Lewis E. Lawes, of Sing Sing Prison, New York, acted as technical advisor of the First National picture, "Twenty Thousand Years in Sing Sing," which is scheduled for this week end at the Avalon.

Warden Lawes, who is the author of the sensational book from which the picture was made, supervised the script in the first place to make sure it was an accurate and authoritative picture of prison conditions. Many of [illegible] as were "shot" at the prison [illegible],000 pet [illegible] these he supervised personally.

The picture is a highly melodramatic portrayal of the human side of prison life, and blends thrills, pathos and romance. It features Spencer Tracy, famous for his portrayal of prison characters. He is supported by an unusually strong cast which includes Bette Davis, Arthur Byron, Lyle Talbot, Grant Mitchell, Warren Hymer Louis Calhern, Edward J. McNamara and Shelia Terry.

Also Technicolor Silly Symphony, "Santa's Work Shop."

Show starts Thursday and Friday at 8:15, Saturday 7:30 and 9:30.

Coming the greatest musical comedy of the year "Gold Diggers of 1933," Jan. 18, 19 and 20.

"The Big Cage," Jan. 23, 26, 27.

"Three Cornered Moon" Feb. 1, 2 and 3.

ST. ANDREW'S CHURCH

Pastor: Rev. R. B. Layton

Mr. L. D. Wright, G.U.E.C.C. Music Director

Services at 11 a.m. and 7:30 p.m.

Sunday School at 11:00 a.m.

At the evening service the subject will be 'The Menace of Nationalism' being a third of the series dealing with our times.

The Young People's Society meets after evening service.

The W.M.S. meets on Tuesday afternoon at three o'clock at the home of Mrs. Pillman, and the Y.W.A. on Tuesday evening at eight at the home of Mrs. Graham.

GOOD ROADS WEST

A lot of good work is being done with the snow plows on the Lacombe-Bentley highway, and the road has been kept in great shape all winter. The other highways entering Lacombe have also received their share of the good work being done by the snow plow men, and now Lacombe district can boast of the best winter roads in the Province.

The regular meeting of the Lest We Forget Club will be held in the Town Hall on Jan. 17, at 8 o'clock.

O.A.C. NO. 21 VERSUS TREBI BARLEY

(Lacombe Experimental Station)

O.A.C. No. 21 has been accepted as the standard by which other varieties of barley have been measured for a number of years. It is a variety that produces good yields, has straw of fair strength, is medium in maturity, and is considered one of the best for malting purposes in Canada.

A variety of sufficient merit to replace O.A.C. No. 21 must be exceptional in one or more characteristics. Trebi is a variety that has slightly shorter straw of fair strength, matures in about the same number of days, produces long and usually, plump kernels, gives yields that usually exceed O.A.C. No. 21 by at least ten per cent, and bids fair to replace O.A.C. No. 21 as a variety to grow for feeding purposes.

Repeated experiments conducted at the Dominion Experimental Station, Lacombe, Alta., have shown that the Trebi is a consistently heavy yielding variety. It repeatedly outyields all other sorts and farmers of the district who grow this sort for feed find that it yields suspisingly well with them. Since it is reasonably satisfactory from all standpoints and is superior to other varieties in yield, there seems no reason why it should not replace other sorts as a feed barley.

The idea has been prevalent that the threshed grain of Trebi is inferior to other sorts for feed. Feeding experiments have shown that while hogs prefer O.A.C. No. 21 to Trebi when given free access to both, hogs will make just as many pounds of pork from one hundred pounds of Trebi barley as they will from one hundred pounds of O.A.C. No. 21.

Trebi barley is not favored by the Canadian malting trade. Since, however ninety per cent. of the barley grown in Canada is used for feed for live stock and since Trebi, not only meets every requirement of a good feed barley but also outyields other sorts, in this area, it is recommended here as the variety of feed barley to grow.

G. E. DELONG

MYRNAM FARMERS ON STRIKE

Not a load of grain reached any of the five elevators at Myrnam, Alberta, Friday, following plans made by a meeting of farmers Thursday night to picket roads and make the strike against deliveries more effective in its fifth week.

As far as can be learned no pickets were seen on the roads near the town although rumors were rife.

At Beauvallon, near Myrnam, there was a rush of grain from the Myrnam district to the three elevators. There was a long line of sleighs, about 80 loads arriving. One farmer alleged threats had been made to him, as he hauled to Beauvallon instead of Myrnam.

PUBLIC LIBRARY

Beginning Jan. 17th, the Lacombe Public Library will be open on Wednesday afternoons from 3 p.m. to 5 p.m. as well as the usual hours on Saturday.

This new service is an appreciation of our fast increasing membership and is a move on the part of the Library Board to provide adequate service to their readers.

WHO'S AFRAID OF THE BIG BAD WOLF

Evidently Red Riding Hood isn't for she is coming to town in person soon (of course no slams to the United Church Choir leader). Watch for date and further announcements.

BUS CO. SUED FOR $30,000 DAMAGES

Action for $30,000 damages as a result of a collision between a bus and an automobile near Lacombe on the Calgary-Edmonton highway last July, was brought by Mr. and Mrs. A. E. Cakebread, Calgary, against the Central Canadian Greyhound Lines, Calgary, and A. H. Austin, Toronto, this morning.

Mrs. Cakebread says she was a passenger in Austin's car which collided with the bus. She claims negligence upon the part of both drivers. As a result, she says she lost her upper teeth, was disfigured and suffered bodily injuries. N. D. Dingle, Calgary solicitor, filed the statement of claim.

Kenneth C. McKenzie, formerly manager of the Eskimo Hockey club, filed suit against the same defendants in November for $1,800 for injuries alleged to have been received in the accident.

Avanelle Adams, who claims to have been a passenger in Austin's car, is suing for $2,400.

LIBERAL LEADER $ THROWN OUT

Toronto, Jan. 6—W. E. N. Sinclair, K.C., house leader of the Liberal party of Ontario, was voted out of office as leader of the opposition in Ontario by a vote 7-3 at a caucus of Liberal members here late Saturday afternoon.

"I've been thrown out, that's all," said Mr. Sinclair.

Dr. George McQuibban, member for Wellington Northeast, is to be house leader at the next session of the house. He had been Liberal party whip.

"I have no comment to make," said Mr. Sinclair after the caucus. "I have been a Liberal since 1906. I cast my first vote for Sir Wilfrid Laurier.

"I have been a Liberal all my life, but apparently they want something hyphenated."

The caucus was attended by 10 of the 15 Liberal members of the Ontario house.

GILKS & HUGHS HOLD LUCKY NUMBER

The ton of coal given away by W. H. Chadwick, coal dealer, to the holder of the lucky number among the buyers of the first fifty tons of coal, was won by Messrs. Gilks & Hughes, Red and White Store, with the number 38.

COAL OIL BLAST FATAL TO WOMAN

Killam, Jan 8—Mrs. C. Lyster received fatal burns when she attempted to light the farm home fire Saturday with coal oil which exploded. The enveloping flames burned her severely. Death occurred in hospital.

BAND CONCERT AND DANCE

A band concert and dance, Lacombe District Band with the help of assisting artists are putting on a concert Friday, Jan. 12, followed by a dance. Music by Wright's Orchestra. Admission: Concert 25c, Dance 25c.

IN MEMORIAM

Kinley:—In loving memory of Mrs. Jas. Kinley, who died at her home, on January 12th, 1928.

"In our homes she is fondly remembered.

Sweet memories cling to her name,
Those who loved her in life sincerely
Still love her in death just the the same."

James Kinley and Family.

WORLD HAPPENINGS BRIEFLY TOLD

The Soviet government was informed that collection of the 1933 grain crop from the peasantry had been completed.

General Victor Vuillemin's "black squardon" of 28 army biplanes has triumphantly completed a 16,000 mile tour of France's African possessions.

Construction of a lumber mill near the mouth of the Somass river at Port Alberni, B.C., involving an expenditure of approximately $250,000 is planned for early next year.

Creation of a national system of credit and finance under the jurisdiction of the Dominion parliament will be proposed at the coming session by William T. Lucas, U.F.A. member for Camrose, Alta.

The war chieftains of France, in a secret session attended by Gen. Maxime Weygand and former premier Edouard Daladier, decided they were flatly opposed to a rearmament of Germany.

War was denounced in emphatic terms by Hon. R. J. Manion, minister of railways and canals, and Canada's representative at the recent disarmament conference at Geneva, in an address before the Womens' Canadian club in Ottawa.

South Saskatchewan and parts of Alberta face the possibility of a "25 per cent crop" unless precautions are taken against the grasshopper menace, Roy E. Smith, superintendent of the Gull Lake experimental farm, told members of the Calgary board of trade.

A prediction that Great Britain, with a deep water route through the St. Lawrence, would "revolutionize, if she does not destroy, the transportation facilities" of the United States, was made by Judge W. E. Woolard, president of the New York State Waterways association.

A new industry, of value to Prince Rupert district and the central interior of British Columbia, is believed to be opening with the receipt by M. M. Connelly of Fraser Lake, of an order for 1,000,000 feet of poplar logs. The logs are destined for China where they will be used in the manufacture of matches.

Figures Are Appalling

Ontario Had 287 Killed In Car Accidents During Nine Months

"Killed, 287; injured, 5761."

If this information were emblazoned in streamers across the front pages of every paper in Canada, a pronounced gasp would go up from every reader in the country.

What a terrible catastrophe! Such wanton destruction of life!

And yet the streamer would be perfectly true.

These lives were not lost, and these people were not injured all in one day —but it is the actual toll of automobile accidents in Ontario during the past nine months. It is probably unfortunate that all these accidents (if they had to happen) had not happened on the same day, so that the streamer referred to could have been published. It might have a greater effect in causing motorists to realize the great chances they are taking through exhibiting carelessness or recklessness on the highways.

Nine months is not a long time in which to record 287 deaths—practically an average of one death a day. It almost leads motorists to wonder if they will be the next to be sacrificed.

There are some encouraging features of the report of the bulletin of the motor vehicles department. For instance the accidents have decreased 5.1 per cent. in the first nine months of the year as compared with the same period last year, with a decrease of 16.8 per cent. in the number of deaths. But that imaginary streamer "Killed, 287; injured, 5,761," is still impressive enough to prove that something more stringent should be adopted by the government to further reduce this appalling casualty list.—Chatham Daily News.

Larger Military Budget

An increase of $39,000,000 in the military budget of Switzerland has been approved at a conference at Berne in which the commanders of six army divisions took part. The new appropriations will be used to strengthen the Swiss army air service and to provide new rifles.

In order that its surplus stock of potatoes can be put to use, County Donegal is seeking the establishment of a government distillery there.

A 121-year-old bell has been recast and erected in Lhanbryd Church, near Elgin, Scotland.

Pigsties in Preston, England, are to be heated by electricity this winter.

Drouth in Palestine has caused a search in many districts for new sources of water.

Japan's low prices are seriously injuring Italy's rayon industry.

Scotland expects an unusually severe winter.

Warm Water For Hens

Birds Will Consume More Than When It Is Cold

Water is one of the essentials for good egg production. Layers should therefore be encouraged to drink water by owners seeing that drinking pans and fountains are never allowed to become empty, and that the water is never allowed to freeze. Winter slumps are often the result of the water supply being cut off by freezing. Even though the water does not freeze, cold water is not so readily consumed as water that has had the chill taken off; birds will consume from 30 to 40 per cent. more water in the winter when the water is warmed. There are various kinds of devices on the market that may be obtained for warming the drinking water; some are electrical and others use oil as fuel.

An Up-To-Date King

Ruler Of Albania Has Introduced Many Western Ideas

King Zog, of Albania, is the youngest king in Europe, and the most energetic. Electric lighting, telephone services and air transport are among his interests. In five years he has imposed a creditable veneer of Western civilization on a once savage and semi-Oriental people. He used to smoke heavily—sometimes one hundred cigarettes a day, but cut them down on the advice of Dr. Bauer, in Vienna, where he went for a cure.

Ontario Welfare Act

That the Mothers' Allowance Act of Ontario might be adjusted for a widow with one child, was suggested by Hon. W. G. Martin in the course of an address before the Women's Liberal-Conservative Association at Toronto. He declared that Ontario's child welfare acts served as "an object lesson and model for the rest of the world."

Policemen of Manchester, England, are to have their "depression cut" restored.

Sign Of The Times

Life Insurance Figures Good Index of Economic Conditions

Certain aspects of life insurance provide a fairly good index of economic conditions. These aspects are (1) the production of new business, (2) the borrowing of money on policies, and (3) the repayment of loans on policies.

According to a statement published by the Toronto Mail and Empire, there has been a steady increase in the volume of new business written during the past four or five months. There has been in the same period a decrease in the number and amount of new loans applied for on policies. And there has been a large increase in the repayment of sums borrowed on insurance during the past two or three years.

This, we may take it, is a fairly good sign of the times. Nor is it the only convincing sign of returning better times.—Ottawa Journal.

Seeks Tomb Of Alexander

Howard Carter Trying To Raise Necessary Funds For Venture

Enthusiastic over his proposed expedition to find the body of Alexander the Great, Howard Carter, discoverer of the tomb of Tut-Ankh-Amen has arrived in Alexandria, Egypt, to raise the necessary $240,000 for the venture. Should Alexander's tomb be discovered, he said, it would be the most important archaeological find ever made in Egypt, even more important than the Tut-Ankh-Amen discovery. The contents of Alexander the Great's tomb, he believes, would consist chiefly of metal, whose intrinsic value would not be as great as the Tut-Ankh-Amen relics. There is the possibility, he added, that Alexander's tomb has been covered by the sea. The system he would use in searching for the tomb he described as "sondage," or sinking of pipes.

The Fallacy Of Inflation

Declaring Stated Value of Paper Does Not Remedy Matters

Those who do not already realize it should be made to understand that there is no more vicious illusion in the world than the illusion that a shortage of money can be remedied by placing an official stamp on paper and declaring that paper shall have a stated value. During every paper-money inflation of the past, whether one takes the case of the French assignats, the German marks or our own greenbacks, the result has always been the same; the faster the paper was printed, the greater and the more poignant the cry of a "shortage of currency." The reason for this is, of course, that such paper depreciates in value much faster than the printing press can produce new supplies.—New York Herald Tribune.

Keeping Cream Sweet

Experiments have shown that cream, cooled to 55 degrees F. soon after skimming, remained sweet to the taste for 36 hours, or long enough for delivery to the creamery in that condition. A temperature of 56 degrees F. can be secured at most farms with ordinary well water if an insulated tank is used. If this temperature can not be secured with water alone ice should be used.—Dominion Dairy and Cold Storage Branch.

Motion picture theatres in Portugal must show Portuguese sound films at every performance.

"SMILING THROUGH"

A charming close-up of Mary Pickford, screen star, as she posed with a bouquet presented her by admirers on her arrival at New York from Los Angeles, where she recently filed suit for divorce against Douglas Fairbanks. She may appear on Broadway after she wins her freedom.

Canadians Live Longer

Residents Of Canada Assured Of Longer Life Than Those Of U.S.

The average Canadian, unless he resides in the province of Quebec, is assured of a longer life than the average white resident of the United States, in spite of the fact the Canadian climate is rather colder.

He has an expectation of 60.74 years of life at birth, as compared with 59.31 years for the white male in the United States. For females the figures are 63.23 and 62.83 respectively.

This fact is revealed by comparing life tables for Canada and the United States recently completed by the Metropolitan Life Insurance Company's statistical bureau.

If Quebec, which is somewhat less favorably situated as to mortality than the rest of Canada, is included, it is still true that from age one on, for males, and from age two on, for females, the Canadian has the better expectation of life.

British Definition Upheld

Co-Discoverer of Insulin Says It Is a Chemical

The British Government is right in deeming insulin as a chemical and in levying an ad valorem duty of 33 1-3 per cent. instead of the prevailing rate of ten per cent. on importations of insulin into the British Isles," states Dr. C. H. Best, professor of physiology and hygiene, director of research, and, with Dr. Fred Banting, co-discoverer of insulin.

"A certain Toronto newspaper has quoted us without authority as saying that insulin is an animal substance," he said. "I am glad to be able to correct this misrepresentation, for as we regard it, insulin is a chemical compound."

Milngavie, Scotland, has abandoned its street cars and is seeking government premission to operate trolley buses.

Railroads in Czecho-Slovakia are busier than a year ago.

Police Chiefs Cannot Agree

Some Prefer Big Men and Others Small Ones on Force

The "long and short" of a policeman was the subject of much controversy at the annual conference of the New England Association Chiefs of Police, but there was no determination whether a "good little policeman" was better than a "good big policeman."

New York Police Commissioner James S. Bolan, opened the argument when he declared that the strong, tall, athletic type of man, who keeps his uniform pressed nicely, his shoes shined, and speaks correct English, made the best policeman. Five foot nine was the shortest he would allow on his force.

Captain Albert B. Moore, chief inspector of the headquarters staff of the New York state police, however, championed the "little fellows." He is far under six feet himself. An ounce of brains is worth more than a pound of muscle on the police force today, according to Captain Moore. A policeman must know a good deal to cope with the average criminal he encounters, and a small quick-thinking man is of more use to the department than the big fellow whose brains work too slowly for modern conditions, Captain Moore said.

Dr. Carleton Simon, former deputy New York Police Commissioner, and criminologist for the police chiefs, said that most police departments require a certain height for policemen, but smaller men made better detectives because they were not so conspicuous when they invaded the underworld in civilian clothes.

Tunnel Safe From Fire

Tube Under River At Liverpool Is Well Protected

The new eight-million pound Mersey Tunnel, under the river from Liverpool to Birkenhead, is now safe from fire. It has presented an anxious problem to the engineers for several years, for it is expected that more than a thousand petrol-using vehicles will be running through at the same time. Strong purifying draughts will be used to drive the dangerous exhaust fumes from the tunnel. There are two special emergency exits with concrete fireproof staircases and fire-fighting stations at short intervals with chemicals sand, hydrants and telephone control.

Purchased From Alberta

Province Supplied Foundation Stock For New Zealand Turkey Farm

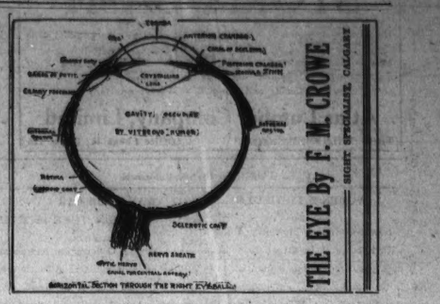

In far away New Zealand, the largest turkey farm in that country has been built up from foundation stock secured from turkey breeders in Alberta, according to information from the provincial poultry department. This New Zealand farm is owned and operated by a woman, Mrs. Katherine Bull, who purchased her breeding stock form Alberta some years ago.

An Unusual Operation

A skilled Denver surgeon recently laid bare the heart of Hubert Madsen of Brush, Colo., stripped it of tissue and saved his life. Madsen had been pronounced incurable, the tissue literally choking him to death. Madsen's breathing was restored to normal and he showed immediate signs of recovery.

In England there are 2,307 blind under 16 years of age.

Leicester England, has a five-year plan to wipe out slums.

THE EYE By F. M. CROWE

Marvels of the Human Eye

By F. M. CROWE, Optometrist-Optician, Calgary

NO. 2—SOME OF THE PARTS AND THEIR USES

The Choroid is the second or pigment layer and is composed principally of blood vessels for the nourishment of the eye; the pigment color acting as a protection against excessive light which might otherwise affect the sensitive Retina. People who lack sufficient pigment are much troubled by "glare." An Albino is a person devoid of pigment. The Choroid layer lies between the Sclerotic and the Retina, all three being closely attached.

The Crystaline Lens (hereafter referred to as the Lens) hanging vertically behind the pupil is transparent, elastic and even when in a state of rest, very biconvex in shape and is capable of assuming still greater convexity. This characteristic is known as "Accommodation" which is most important because it is this property which enables us to see at different distances. Accommodative power is at its height at the age of twelve and steadily diminishes as we grow older. At the age of about forty the average person has lost so much of the Accommodative power that he needs glasses to focus at the reading distance although vision may be perfect farther off at any age. Hence the necessity for wearing glasses for close work after middle life is due to a natural change common to man. The Lens is made up of many layers as is an onion which accounts for its elasticity when acted upon by the Ciliary muscle which is attached to the outside edge of the Capsule which surrounds the Lens. Sometimes the Lens becomes hard, cloudy and opaque and in this condition it is known as a Cataractous Lens or Cataract induced by various causes such as Bright's Disease, blows, extreme old age and occupations requiring excessive heat and light. Contrary to a common belief Cataracts never grow on the outside of the eyeball. So much misunderstanding exists regarding Cataracts that the matter will be discussed fully in a future article. The Retina is the inner lining and the most delicate, sensitive and important part of the eye. It is really a spreading out of the Optic Nerve which connects the eye with the brain where seeing is actually accomplished. Although as thin as tissue paper, the Retina is composed of many layers each having its special function. The mysterious operation of the Retina is, generally speaking, a sealed book. It is very sensitive to light impressions and may be likened to the plate of a camera. All objects are focussed on the Retina upside down and we see them as we do because our brains have so interpreted them from infancy.

(To Be Continued Next Week.)

Recipes For This Week

(By Betty Barclay)

ORANGE NUT BISCUITS

(Make 18 medium sized biscuits)

2 cups sifted flour
4 tsp. baking powder
1 tsp. salt
¼ cup sugar
¼ cup shortening
½ cup finely chopped nuts
1 egg
Orange juice
1 tbsp. orange marmalade

Sift dry ingredients together. Cut in shortening. Add nuts. Beat egg; pour into measuring cup; add enough orange juice to make ⅔ cup. Combine with dry ingredients and add marmalade. Knead a few seconds on slightly floured board. Cut and bake in hot oven (425 degrees F.) for 10 to 15 minutes.

Note: A little more orange juice will be needed with some flours to make the dough soft.

PRUNE STUFFED BAKED APPLES

6 cooking apples
1 cup cooked prunes
3 tablespoons peanut butter
½ cup brown sugar
3 tablespoons butter
Cloves
Water

Pit prunes and cut into small pieces; combine with peanut butter, mixing thoroughly. Remove cores from apples, removing enough of apple to allow for stuffing. Fill the cavities with prune and peanut butter mixture. Place apples in a baking pan and stick 3 or 4 whole cloves into each. Sprinkle with sugar, dot with butter, add about 1 cup of water, and bake in a hot oven (425 to 450 deg. F.) for about 55 minutes or until apples are tender. Serve while hot, plain or with cream.

Technical School Support

Saskatchewan Will Ask For Extension Of Federal Act

The Saskatchewan Government will support the representations of the technical school boards of the provinces for an extension of the Federal Technical School Act, a delegation representing the Regina and Saskatoon board was informed.

At the present time there is an unexpended balance of federal grants due Saskatchewan from Ottawa, amounting to some $100,000 under the agreement which expires on March 31.

The act provides for a dollar for dollar expenditure on the part of the province in order to qualify for the grant. If the act expires at the end of March it would automatically cancel Saskatchewan's rights to this amount.

In addition the boards are pressing for the inclusion of an agricultural course.

Annual Butter Festivals

In the Tibetan principality of Choni, China, butter festivals are held annually. Monk artists mould great butter images for the occasion; yak butter, highly coloured, is the medium used, and all work must be done at low temperatures.

Curbing The Thames

British Parliament Taking Steps To Eliminate Flood Menace

On a January night five years ago the Thames burst its bonds, poured into the London streets, drowned 15 people in their beds, and rendered upwards of 1,000 families homeless. The catastrophe was the result of a higher tide than had been recorded for 100 years—higher by six feet than the experts had thought possible. It was caused by the malign coincidence of a heavily flooded river meeting a spring tide that had been piled up by a gale.

That combination of circumstance was unusual, but by no means impossible of recurrence, and Parliament therefore appointed a Department Commission to consider how best the danger can be met. In its report, the curious fact is noted that "evidence is accumulating of a subsidence in Southeast England, accompanied by an additional subsidence in London." But the tendency of Kent to settle into the North Sea is presumably one that legislation may safely ignore. It can hardly affect the level of the Thames with normal calculation.

The attacks of flood, gale and tide are of more instant menace, and to meet them the committee advise the creation of a joint authority of 15 members drawn from the various existing bodies concerned with the tidal river, whose duty it would be to "construct an unbroken chain of defence throughout the whole tidal area." The plan is well articulated; but it is important to remember that the expense of defences in the tidal area can only be kept down if drainage schemes in the inland regions where floods accumulate are actively pursued. It would be poor strategy to build elaborate masonry at the river's mouth to meet floods which need not occur if land drainage at the headwaters were vigorously undertaken.—Manchester Guardian.

An Equine Hero

When River Flooded Big Horse Saves Pony From Drowning

A tale of equine heroism—or just plain horse sense—from the flood-swept Puyallup River bridge region was being told by state highway patrolman Ben Roush, of Tacoma, Wash. Three horses, in a flooded pasture near the bridge, Roush said, were struggling to reach dry ground by swimming. "One was a Pinto pony," the officer said. "He was almost exhausted, but every time he'd sink, a big gray horse would grab him by the mane and pull his head up." The animals finally reached safety.

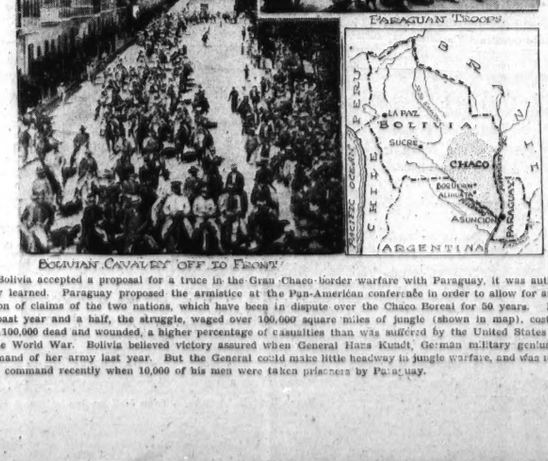

New Lumber Mill

Construction of a lumber mill near the mouth of the Somass River at Port Alberni, B.C., involving an expenditure of approximately $250,000 is planned for early next year.

According to a dentist, a husband is nothing but a switchboard with the nerve killed.

Japanese are opening a new automobile assembly plant in Mukden, Manchuria.

TRUCE IN GRAN CHACO BORDER WARFARE

BOLIVIAN CAVALRY OFF TO FRONT

Bolivia accepted a proposal for a truce in the Gran Chaco border warfare with Paraguay, it was authoritatively learned. Paraguay proposed the armistice at the Pan-American conference in order to allow for an arbitration of claims of the two nations, which have been in dispute over the Chaco Boreal for 50 years. During the past year and a half, the struggle, waged over 100,000 square miles of jungle (shown in map), cost more than 100,000 dead and wounded, a higher percentage of casualties than was suffered by the United States forces in the World War. Bolivia believed victory assured when General Hans Kundt, German military genius, took command of her army last year. But the General could make little headway in jungle warfare, and was recalled from command recently when 10,000 of his men were taken prisoners by Paraguay.

Occasional Wife

By MARGARET PEDLER
Author of "LIPSTICK GIRL" etc.

SYNOPSIS

Camilla Hoyt, young and beautiful art student, and Peter Anson, a struggling sculptor, fall in love and marry secretly, decided to live apart until the time when Peter can support himself. Camilla, left with a small sum of money, decides to invest it in a hat shop and hopes to increase the money when she comes of age. She is preparing herself for life with a course in commercial art, hoping to get a job to enable her to support herself. She has been making the rounds of the agencies. Peter, working in his studio on air ideas for a figure with which he hopes to win a scholarship to study abroad, receives a call from a beautiful model, Sylvia Todd, who refers to Derek for support, nothing if he will employ her. He cannot afford a scandal and, confined to think, if he does discusses the matter of a model with Camilla and decides to employ Miss Todd. Together Camilla and Peter decide on the figure. They are at the height of their happiness. At home Sylvia receives a mysterious phone call. Peter begins work on his figure for the exhibit and Camilla, at her family's summer home, is a bit dismayed at being without him. Avis Wynn, one of Camilla's friends, who is in love with Peter herself, suggests that she and Camilla and Terry Wayne drive into town to get Peter for a party. Arriving with Miss Todd, Peter discovers she is also employed by Gus Matson, his former benefactor. Matson has tried to take Camilla from him and with whom Peter had quarrelled. Camilla and Avis arrive to take Peter off to the party. He goes, but being without money, slipped away to a nearby pawn shop for a few minutes to pawn his watch.

(Now Go On With The Story.)

CHAPTER XVIII.

"How much for that?" demanded Peter, laying his watch upon the scratched counter, over which innumerable articles had passed from desperate and unlucky hands.

The little bearded proprietor squinted up near-sightedly at Peter's tolerable height. He cleared his throat doubtfully and looked up the watch in experienced hands.

"Oh, it's a good one," Peter encouraged. "I bought it in more flush times when I was young and giddy."

"Sure you ain't older and giddier," observed the little man, slyly, and peered at him with a twinkle.

"That, maybe," Peter agreed. "But I need all you can give me. I'll be back to watch next Rodeo day."

"Uhm. That's what they all say. Five dollars, was the brisk ultimatum.

"Oh, say, listen, mate, I have to have twice that."

"If it was a hip flask I could give you more. Nobody cares what time it is these days," he spread his hands and shrugged his shoulders with elaborate boredom.

"Can't you stretch a point this time and even it upon some fellow who doesn't need it as much as I do."

"Everybody thinks he needs money worse than anyone else," immovably.

"All right, I'll take the watch back. I may need it worse than the money, after all," carelessly.

The man subbed his fingers over the case and squinted at it again. Finally, "Well, ten dollars, but I'll never get that for it if you don't show up to claim it."

"Don't worry, I'll be back," Peter assured him with relief. He paced the floor of the dusty shop with impatience, while the owner procured the money and the claim check.

What tragic needs and heartaches the odd collection of objects represented.

Peter felt woefully depressed in their surroundings.

The man returned from his dusty little den and pushed the store. "Hope you have a good time with the girl," he remarked with a twinkle, as he handed the ticket and the ten dollars to Peter.

He ignored the implication of this and counted out the money. "How you sell?"

"Well, men mostly hock their possessions for three or four reasons. They're hungry, or want liquor, or havin' family troubles, or need money to send to a girl. You don't look hungry, you're not drunk and you look too happy to have family troubles, so—" again, he spread his hands and smiled sagaciously.

"Okay, thanks, I'll be seeing you later," Peter called, hurrying out on the street. Ten dollars more or less was what he needed, but it was better than being broke. His spirits rose rapidly as he turned along the street and for the first time he realized the absence of Miss Todd. Camilla for almost two days. It would be hard to sleep on that night for the participants of the house party knew. Retracing his steps by the labyrinthian way by which he had reached the shop, he joined the three again and they resumed their wending way across the park and out the boulevard which followed along the lake shore.

A cool rush of wind prevented conversation with the two in front, so Peter devoted himself to Avis, who responded with exuberant spirits.

"So you're working for the exhibit, I hear," she remarked confidentially. "I supposed that was what you were covering when we went in, but I said nothing because I know about it. I'm dying to see it, though, Peter. May I run in sometime, alone?" her voice cajoled.

"There's nothing much to see yet," he evaded. "I'll have to work faster if I finish in time. That's why I shouldn't be running away to play like this."

"But you shouldn't work all the time," especially in this terrible heat," with deep concern. "Have you a model?"

"Had to have. Couldn't afford one, but had to take a sporting chance."

"Oh! May I—help?" solicitously.

"Well, it's not as bad as that," he dismissed her offer brusky, "I hear that if I don't win it will take me awhile to recover the loss."

"I'll do all I can in your favor," she leaned against him to confide.

"Oh, say don't you try to influence the judges!" he drew back with dismay. He had quite forgotten his conversation with Avis on the night of the dance, about her uncle being on the scholarship committee, until this moment.

"Why shouldn't I?" she insisted.

"I told you why," he replied bluntly. "Besides you couldn't do it. Probably be more likely to hurt whatever chance I did have. But if you don't promise to stay out of it, I'll not enter."

She smiled up at him with relieved admiration. "Peter, dear, I was only testing you. I knew you were on the level, but I wanted to prove it."

He also was relieved, but puzzled. "Why should you want to prove anything about me?" he asked tonelessly.

Again, she leaned heavily against him with the swerving motion of the car as it wound along the boulevard curves. "Because I like you a lot."

"That's nice," he said, after a moment, and as if the confession were a little joke. He wondered what Avis would say and think if she knew that it was his wife who rode in front of them with Terry. He resolved then and there something would have to be done about this situation. He must persuade Camilla to announce their marriage, even though they continued to live apart. He had not favored the idea of secrecy from the beginning, but he appreciated Camilla's situation.

Everything was bright so long as others were not involved. But Camilla and Sylvia, and now Avis, and Diane was Terry, before him, smiling into Camilla's eyes and no doubt anticipating as profitable an evening in her favor as Avis was planning for him. He would get Camilla to announce the surprise this evening.

But he had no opportunity to talk with Camilla alone until late that night. All sorts of things had arisen at the cottage. Others were dropping in and then everyone returned to the beach and the water.

At the insistence of the others, Camilla dived another series for Peter's benefit. He was amazed at her skill. Modest little thing, he thought, who never boasted of what she could do. And she could do so many things well. She was so wonderful that he didn't half deserve her.

She swam ashore after the somersault dives and clambered over the sand toward the boathouse. Presently, they sounded the pulsing of a motor within, and she guided a speed boat through the slip into the lake. "Come on, everyone," she called, "we're going to cross into the setting sun, no speed limit and no traffic cops. Peter, you have to play the game now that we've started. No fouls, now. We have to win. It makes me laugh the way we're putting it over on Avis, though," and chuckled. She always was a cat, so I don't mind scratching a little, too. If she were anyone else, I'd feel sorry for her."

"But Ca—" he began, when they were interrupted with the decision to race ashore.

Peter and Camilla dived dreading under over the motionless scene, shouts and laughter and splashing water made pandemonium for a short time, then everyone sank wrarily into awnings and chairs on the screened veranda to await dinner. Someone suggested a rubber of bridge. Some desired a game of cards, others insisted upon dancing.

"How 'bout you?" Matt asked, "penny a point?"

"Penny!" scoffed Warren Selsby. "Better make it a dollar. I have to get back to the city two hundred I lost to Terry the other night. The old man won't pay my allowance 'till it's due, if I starved."

"Starved, thought Camilla. "He has no idea what the word means. And I wonder what he thinks he does to deserve an allowance."

"Oh, make it ten a point, for this time," Matt insisted. "Remember, this is no stag game. You're playing with girls."

"Okay," approved Terry. "Make it snappy then. Come on, Anson."

For the second time that day panic seized Peter. He had leaped neatly over the electric spell into the furnace, to make the metaphor modern. How could he play bridge for ten cents a point with the dollars in his pocket? Besides he was no champion at the game, having devoted practically no time to it as compared with these others who played for hours at every stay and night.

(To Be Continued.)

The Original Aeroplane

Would Bring Back to United States From England Wright's Machine

The Smithsonian Institute has moved to close a long-standing breach with Orville Wright in an effort to bring back to the United States from England the original Wright airplane.

As a peace move authoritative sources said, the Smithsonian Institution has prepared to assure Wright that this 'plane would be given the most prominent spot in the national museum's aviation section—a location immediately in front of Lindbergh's 'Spirit of St. Louis'."

The controversy arose officially over a label written for the airdrome of 1903, which characterized the plane as the first machine capable of flight carrying a man."

This was rejected by the Wrights as an intentional affront. As a result of the controversy, Orville Wright shipped the original airplane to the chief exhibit at South Kensington, England, where it has been on exhibition since 1928.

A New Experiment

Attempt Being Made To Improve Tyics Of Soybeans

An attempt is being made this year to grow soybeans in the greenhouse at the Harrow Experimental Station. Electric lights are being used to supplement the sunlight and these are left turned on during the night to induce a strong vegetable growth. The purpose of this work is to allow crosses to be made during the winter months. The seed will be matured in the greenhouse and planted in the field next spring. In this way two sets of crosses may be produced in one year, whereas formerly this work could be done only in the summer. The work of producing improved type of soybeans will, therefore, be able to advance much faster than in the past.

New Triumph of Surgery

Transfusion Of Blood Made Easier By Recent Invention

A mechanical heart, invented by two French doctors, was hailed as a new triumph of surgery which will make the transfusion of blood much easier, when tested at the General Infirmary, Leeds, England. The "heart" is worked by a small motor of one-fiftieth horsepower and pulses at the rate of sixty beats to the minute. It connects two tubes, each of which is fitted with a hollow needle. One needle goes into the donor's vein and the other into the vein of the patient. The "heart" acting as a pump.

Would Commemorate Event

Urges 400th Anniversary Of Landing Of Cartier Be Recognized

Public recognition throughout Canada of the 400th anniversary next year of the landing of Jacques Cartier on the shores of Canada, was brought before the Dominion-Provincial Transport Conference by Prime Minister R. B. Bennett.

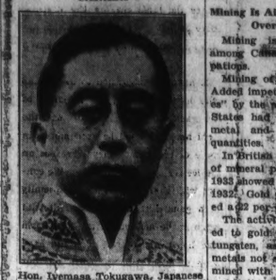

"There is a very urgent demand for the general celebration of this anniversary," the prime minister said. The occasion might involve a "national recognition of what in realty was the laying of the foundation of western civilization in this country."

Big Insurance

Britain's 47,000,000 people held life insurance worth $5,176,027,035 at the end of 1931, according to statistics just issued by the Industrial Assurance Commissioner. Policies numbered 63,946,191, an increase of nearly 2,500,000 over 1930. Claims cost the companies $149,800,000.

In the modern home, with its labor saving everything but the children.

JAPANESE MINISTER TO CANADA

Hon. Iyemasa, Tokugawa, Japanese Minister to Canada who made a recent visit to Washington.

No Desire For Aggression

Nations Piling Up Armaments By Reason Of Fear

"We do a grave injustice if we impugn the modern communities are piling up armaments merely from reckless ambition or a desire to be aggressive," declared Sir John Simon, secretary for foreign affairs, in a speech recently. "The real explanation is the fear which prevails among some who ought to be neighbors," he added.

"Do not let us indulge in too much complacency about the condition of our own country, but let us recognize what a blessed thing it is to call one's self a British subject," the minister went on. "There are people even here who, observing the apparently great success of tremendous personalities in some foreign lands, are minded to suggest we might imitate them. They fail to indicate who is the tremendous personality here who is to play the part of Mussolini or Hitler.

"I hope, very soon," said Sir John, with reference to unemployment, "it will be possible to say that within the past 12 months 860,000 fellow citizens have found work who were without it during the year. Foolish cheerfulness it befits the present time, but let us maintain reasonable optimism."

Invents Fish Traps

U.S. Soldier's Idea May Revolutionize The Fishing Industry

Lieutenant Estiterio S. Yanga, of the United States army and in the Philippines, has perfected an invention which he believes will revolutionize the fishing industry of the islands and contrivel other devices of the kind. The process of manufacturing the traps became public knowledge when fishermen readily attracted by local Tao light, he says, will be effective in attracting fish as the bait itself inside the trap. Conical receptacles on the walls of the trap are so constructed that when a fish gains entrance, it cannot escape. The walls are perforated so that fish outside get a good view of what is going on inside.

Europe Buying Apples

Canadian Growers Get Better Prices from Purchasers on Continent

With much better prices being received in the markets on the European continent, Annapolis Valley apple shippers have switched the trade from England to foreign parts.

A glut of the fruit on the English market sent prices to low levels and already heavy crates, 1930 gone forward to Rotterdam, the fruit being destined largely for continental points.

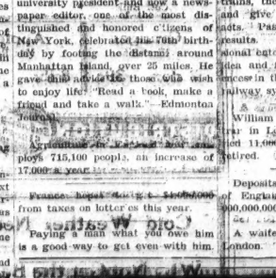

Walking Keeps One Young

That there is no better way in which to defy old age than to keep walking was illustrated the other day. Dr. John C. Speary, former university president and now a newspaper editor, one of the most distinguished and honored citizens of New York, celebrated his 70th birthday by footing the distance around Manhattan Island, over 25 miles. He gave this advice to those who wish to enjoy life: "Read a book, make a friend and take a walk."—Edmonton Journal.

Agriculture in Ireland now employs 715,100 people, an increase of 17,000 a year.

France has a budget deficit of $40,000,000 from taxes on lotter es this year.

Paying a man what you owe him is a good way to get even with him.

The new "rear view" streamline design which drastically eliminates wind resistance, giving more miles per gallon, fuel consumption and real riding comfort in both front and rear seats.

Jobless Pan For Gold

Mining Is Aiding British Columbia to Overcome Depression

Mining is coming to the fore among Canada's industries as depression patiens.

Mining of gold leads the activity. Added impetus was given the "rushes" by the announcement the United States had set new prices on the metal and would purchase large quantities.

In British Columbia the gross value of mineral production for a period in 1933 showed a favorable increase over 1932. Gold produced this year showed a 22 per cent increase.

The activity, however, isn't confined to gold alone. Nickel, copper, tungsten, asbestos, silver and other metals not so easily found are being mined with greater rapidity.

Aviation has become more and more associated with mining. Airlines reaching into the northern wilds have gained considerable business, ferrying quantities of pure gold and other minerals to market. Prospectors are flown to their claims in a few hours.

Unemployment has shown a decrease due to the mining activities. A favorable percentage migrated with pick and shovel to "pan" mountain streams—others sought employment in camps.

Hardly Worth While

Chicago Election Recount Will Cost Rivals About $60,000

Here's one for the books:

The recounting of votes cast in a municipal judgeship election at Chicago will require about five years for completion, while the term of the office involved calls for six years.

Judge Erwin Hasten and Judge Samuel Heller are the principals in the unusual contest of votes, many of which have been found fraudulently cast.

With Hen accounting moving into the eighteenth week, only 172 of the city's 3,029 precincts have been rechecked. This is at the rate of 5.9 precincts a week. Challenges have slowed up the work.

The cost of the recount, it was estimated, will run about $60,000, which must be borne by the contestants themselves.

Prefer To Walk Down

Number of People Use Elevator Only One Way

It is a law of physics that "what goes up must come down," but imaginative scientific embarrassment when mathematical figures show that of the 16,000 persons who use the elevators in the New Federal building at Boston, daily, 8,500 persons go up, but the cars carry only 7,500 down.

But it was all cleared up when the building authorities revealed that the discrepancy is due to the desire of some to indulge in stair-walking exercise. But they all take the less vigorous form—walking down instead of up.

Old Legend Shattered

Cow Bay Not Named After Old Settler's Bovine

Origin of the name given Cow Bay, Cape Breton, still remains a mystery but old legend that for years has surrounded it has been shattered. Evidence disproving the old story the bay was named after John Meloney's bovine was submitted by a special committee, consisting of Judge Walter Crowe, Brian F. Egan and E. T. McKeen, to the Historical Institute. They found the old settler's cow had not even appeared when the bay was first named.

Entertain the Passengers

Passengers in subways of Berlin are being entertained by vaudeville performances given by unemployed artists, who buy tickets, board the trains, then throw off their jackets and give balancing and acrobatic acts. Passing the hat brings good results. Singers and other professional entertainers are taking up the idea and find the best paying audiences in the business sections of the railway system.

William Lee, superintendent registrar in London, England, who married 11,000 couples in 30 years, has retired.

Deposits in the "big five" banks of England now total nearly $10,000,000,000.

A waife blackbird recently visited London.

Chapel Built Of Logs

Novel Architecture Used In Building at Cowichan, B.C.

Of novel architecture yet fitting in with the background, the new Queen Margaret's school chapel at Cowichan is a monument to the generosity and loyalty of present and former mentors of the school.

It is a log structure, but instead of the usual manner of construction in which round logs are made to fit at the corners, they are fitted by a system of dritholts, which are invisible when the logs are in place, and allow for expansion and settling. The idea of using this style of architecture came from C. Stuart who also arranged the drift-bolt system with special regard to the needs of the chapel. He went to the trouble of erecting a piece of wall as influence for demonstration.

The building is 30 feet by 60 feet exclusive of the vestry, and will accommodate 120 persons. The top of the bell tower is 35 feet above the ground and the top of the wall 16 feet. The material came from Hillcrest, including specially cut timbers which were tongued and grooved for the gable ends. Douglas James was the architect and C. C. Brown the contractor.

THE RHYMING OPTIMIST

By Aline Michaelis

YOU AND I

Who are they whom labor brings
Boons too blessed to deny,
Toiling on with heart that sings?
You and I!

Who are they who learn at last
Life is real and life is earnest,
And, so learning, leave the past?
You and I!

Who are they who seek and gain
Tender heart and seeing eye
As the rich rewards of pain?
You and I!

Who are they who often find
As the days so surely fly
Just how good the old world is?
You and I!

Can Choose For Itself

Irish Free State at Liberty to Break With Britain

The Irish Free State is a republic in fact if not in name. Its chosen leader has repudiated all co-operation with Britain and the Empire while seeking only to retain the trade benefits that accrue to Empire countries.

The British government has nothing to hope from efforts to reconcile the irreconcilable. The Irish Free State should not be allowed to take itself outside the British Empire merely to the extent that it wishes to take itself out. The only way of dealing finally with the situation is for the British government to invite the Free State all the way out.

If the Irish Free State wishes to have no political association with Britain and the Empire countries that will be the loss of the Free State, not the loss of Britain or of the British Commonwealth. The decision is of its own choosing. The economic consequences of such a severance will be its own responsibility.

New Appliance Used

Apparatus for Transfusion of Blood Has Many Advantages

As demonstration was given at Leeds General Infirmary of a new appliance for the transfusion of blood. The demonstration was given by two Parisian surgeons. M. Becart and M. Pauchet who first showed their appliance in Paris a fortnight earlier.

The great advantages of the new method are that it prevents the exposure of the blood to the air and maintains its temperature. The apparatus consists of a small electrical appliance with two tubes, one taking the blood from the donor and the other transmitting it to the patient.

Per Centage In Civil Service

Figures Show Canada Has High st With Exception of Belgium

When it comes to the percentage of population employed in the civil service, or public service, Canada has the highest percentage except little Belgium. According to Prof. Cole, the noted economist, the percentage of population employed in the United States is 1.3; England, with public services and armed forces combined, 11.5; France, 2.6; Germany, 2; Italy, 1.5; Poland 0.8; Sweden 1.1; Belg um 3.3; Denmark 0.715; Holland, 1.1; Australia 3.72 New Zealand, 4; Canada, 2.8.—Lethbridge Herald.

Somebody Has To Eat

"Farm products cost more than they used to." "Yes," replied the farmer. "When a farmer is supposed to know the botanical name of what he's raising, and the entomological name of the insect that eats it, and the pharmaceutical name of the chemical to spray on it—somebody's got to pay."—A.C.C.O. Pr. ss.

Harbin, Manchuria, has a building boom.

China has experienced 2,000 famines in the past 2,200 years.

...chest COLDS

PROVED BY 2 GENERATIONS

Little Helps For This Week

Well done good and faithful servant; thou hast been faithful over a few things I will make thee ruler over many things, enter thou into the joy of thy Lord.—Matthew 25.23.

O Father, help us to resign
Our hearts, our strength, our wills to Thine;
Then even lowliest work of Thine,
Most noble, blest, and sweet will be.
—H. M. Kimball.

Nothing is too little to be ordered by our Father, nothing too little in which to see His hand, nothing which touches our souls too little to accept from Him, nothing too little to be done by Him.

A soul occupied with great ideas best performs small duties, the divinest views of life penetrate most clearly into the meanest emergencies; so far from petty principles being best proportioned to petty trials, a heavenly spirit taking up its abode with us can alone sustain well the daily toils and tranquilly pass the humiliations of our conditions.
—J. Martineau.

Whose neglects a thing because he suspects it is too small for him, and which he should do is deceiving himself, as he is not so little but too great for him and he does it not.—E. B. Pusey.

Tuberculous Tests Will Be Continued

Hot Ottawa To Abandoning System of Cow-Testing

The system of cow-testing under the direction of the Federal department of agriculture, will be abandoned.

Under this system records were kept by the department of milk production, quality, etc., with an idea of improving dairy herds in various parts of the Dominion. It is understood provinces, however, have no plans over this work, and the provincial authorities consider that it is time to turn the responsibility completely over to the provinces. Provinces which have not been doing the work thus far are being notified of the decision. The province of Quebec is one of these.

The cow-testing system, in addition to do with the tuberculin test which the Dominion authorities conduct for the prevention of disease among cattle. This, it is stated by the department of agriculture officials is not being abandoned, but will be continued.

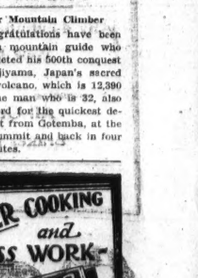

Park Weather Station

Dominion Meteorological Station For Prince Albert National Park

Tourists about to vacation in Prince Albert National Park, will in the future be able to know what the weather is at that point. Instruments are now arriving for a meteorological station of the Dominion service at the resort centre and the station will report twice daily as the others in the chain do for 12 months in the year. It will be in charge of an employee of the parks branch of the Department of Interior.

Record For Mountain Climber

Official congratulations have been extended to a mountain guide who has just completed his 500th conquest of Mount Fujiyama, Japan's sacred snow capped volcano, which is 12,390 feet high. The man who is 32, also holds the record for the quickest decent. He went from Gotemba, at the base, to the summit and back in four hours 45 minutes.

STETTLER WINS 7-0

In a Big Four League Fixture on Tuesday evening last, Stettler defeated the local club by the decisive score of 7-0. Lacombe team has no alibis to offer—they just lost, that's all.

It has been suggested to us by fans who have witnessed the majority of the games that the "subs" on the local line-up should be used more—in some of the games they were not on the ice for even one minute. We concur with that suggestion. Especially in a game like the one in Stettler when in the last period the local team was hopelessly beaten, it would have been an ideal time to work out our local subs. Nothing was to be lost, and it is only reasonable to believe that by playing on the team the sub line would improve. They are of no assistance whatsoever if they remain in the penalty box.

Improving Hog Production

Those engaged in the promotion of the campaign to improve the quality of hogs produced in the province, are receiving a most encouraging response from the farmers in the central and northern parts were the campaign has been in progress. During the past few months no less than 500 gilts and sows of approved type have been ordered by farmers under both the federal and provincial brood sow policies, of which number some 350 have already been filled. The bows now being put out to farmers under these policies are all bred beforehand to high class boars. This promotion work cannot fail to result in a definite swing upwards of the percentage of select bacon hogs produced in the province next season.

L. P. Oulton, of Lacombe, who is known as the "Potato King" has changed his business and this week sold to McKenzie Bros., an outstanding steer weighing 1450 lbs. which gives real support to the Bennett Government and Spud Islanders.

C. F. DAMRON, Auctioneer

AWAY FROM FREEDOM

Nobody who reads so much as newspaper headlines will dispute that the world is at present passing through an age of violence. Violent methods have been used during the past decade in Russia; are used today to an appalling extent in Germany; to a lesser degree in Italy and Poland.

There is, however, one important difference between the violence which at present obtains and the violent events which, for example, preceded the outbreak of the Great War.

The Balkans, long a cradle of unrest, have just witnessed another assassination. This time it was of the Premier of Roumania, Ion G. Duca. The last really important Balkan assassination was the murder of the Archduke at Sarajevo which precipitated the Great War.

And here is the essential difference—the murder of the archduke was dictated by the desire for freedom on the part of the people of Russia and Hertzgovena, while the murder of the premier seems to have been dictated by the desire for tyranny on the part of Fascists whom he has long opposed.

The European frictions of today seem to be caused almost entirely by the desire of autocrats, or advocates of autocratic rule, to wrest, freedom from the individual.

In every country, but in varying forms and degrees, this struggle against freedom is in progress. In Germany it seems to have been completely successful, in Italy also, but Mussolini's subsequent policies seem to be directed toward restoring a measure of freedom to the individual.

It is impossible not to correlate the similar movements of this nature that are taking place in the various storm centres of the Continent.

HOG POOL MEETING

The Annual Meeting of the Blindman Valley Hog Pool, will be held in the Church Hall, Lacombe, on Saturday, 13th inst. Hon. Geo. Hoadley will be present and address the meeting.

Smothering Sensations Faint and Dizzy Spells

MILBURN'S HEALTH AND NERVE PILLS

Those feelings of faintness; those dizzy spells; those all-gone smothering, sinking sensations which come over people, from time to time, are warnings that should not go unheeded. They indicate an extremely weakened condition of the nerves and other vital organs, and should be given immediate attention.

Those suffering in this way will find in Milburn's H. and N. Pills a remedy with which to recuperate their health, build up their run-down system, and bring back their bodily vigor.

Ask your druggist for Milburn's H. & N. Pills.

Christianity And The Crisis

Much has been said and written about the economic crisis against which the peoples of the world have been battling for four years, about awaiting minds. Many speeches have been made; world statesmen have had their say. Many books, many editorials, many articles have been published in which the economists have set forth their views, but speeches, books, editorials and articles have but served to illustrate the complexity and variety of the problems which clamor for solution. Many remedies have been suggested for the economic ills from which mankind is suffering, but the doctors have been far from unanimous in their proposed treatments and, consequently, the patients can scarcely be blamed for their hesitation to apply the cures prescribed. Despite the clash of expert opinion, however, the patients themselves have given abundant evidence of vitality which is, perhaps, the surest sign of their ultimate recovery. They have displayed a firm determination to think things out for themselves, to seek a way out of present difficulties and a way back to a prosperity which they are determined to make permanent.

One of the best contributions to the "non-expert" thought upon the crisis and the various problems contributing to, and arising from, post-war economic conditions is the series of articles recently compiled in a single volume under the title, "Christianity and the Crisis". The contributors are churchmen, clerical or lay, but their method of approach to the various phases of their subject is not made from the purely theological angle. When they discuss the confusions of the present situation, they write with knowledge of their subject, and that is true whether the write of intellectual and moral confusion (which might, of course, be expected) or of social, economic and international confusion (which, on the other hand, might not have been expected). One is forced early to the conclusion that these churchmen are no mere visionaries actuated by high moral purpose but divorced from practical affairs. One would for example have to travel far to equal the masterly simplicity of the discussion of financial and monetary problems contributed by Dr. Hewlett Johnson, Dean of Canterbury. One is not surprised to learn that besides being a Doctor of Divinity, the Dean has degrees in Science and Engineering.

The preface furnishes the general theme upon which the volume is based, and the thought which should be an inspiration to all who, having given serious thought to the problems of the hour, are beginning to doubt whether final solution is possible. Drawing a parallel between the years following the battle of Waterloo and the present time, the preface states:

"A period of post-war exhaustion had begun in 1815, as in 1918, with its social antagonism and moral confusion. Civil disturbances more violent than anything we have known this time in England or America. Yet the religious accumulation of moral power had been so ample that the foundation of civil and religious liberty had been already laid, the establishment of democratic government had begun, slavery had been abolished.

"It is the belief of those who are contributors to 'Christianity and the Crisis' that the same moral power is with us today, because the same religious spirit is at work—is, indeed, as most close observers believe, emerging now with greater strength from the confusions and disloyalties of the post-war decade. . . .

"The issue, indeed, is simple. The motives and methods of human life are not sufficiently moralized; it was to 'moralize' the machinery of production, to limit the power of selfishness, that Wilberforce and Shaftesbury were working a century ago; but in many ways industry and business, and family life, and civic and political activity, need further moralization. Money has been overlooked in its moral aspect and treated as machinery . . . and, because the nations and their representatives have not yet learned the moral elements of international behavior, we stand at this moment on the brink of irretrievable disaster."

The way out then is for application of the moral teachings of Christianity in international, national, civic, business and family life according to the churchmen who, having examined the problems of the hour, discern the need and point the method.

Crime Against Youth

Hon. R. J. Manion Denounces War In Emphatic Terms

War was denounced in emphatic terms by Hon. R. J. Manion, Minister of Railways and Canals, and Canada's representative at the recent disarmament conference at Geneva, in an address before the Women's Canadian Club at Ottawa.

"One hundred years from today, or possibly sooner, we will be looked upon as barbarians for permitting war to exist," the minister declared. "War is a crime against youth—the elders make the blunders and youth pays the price."

On this continent the nations were peace loving. "War is as unthinkable between Canada and the United States as between Canada and the United Kingdom, or indeed between the United States and the United Kingdom," Dr. Manion observed.

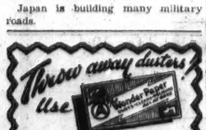

A Sedative For Nerves

Appreciation Of Music Is Great Help States Doctor

Dr. Wolf Adler, of Bellevue Hospital, offered music as sedative for unsettled nerves. "A fond appreciation of music by an individual can prevent nervous disorders," he told the American Creative League of Music Students. "Modern psychology and pschiatry have definitely established through its accumulative evidence that music is one of the most powerful agents in relieving and in many cases eliminating completely nervous and mental disorders."

The ashes of Sir Henry Royce, the motor-car maker, who died in April, are to be deositied in an urn at the Rolls-Royce works at Derby, England.

Japan is building many military roads.

Great Masterpieces

To Be Shown At British Art Exhibition

Great masterpieces from Buckingham Palace and Windsor Castle will be placed on view to the public for the first time at the Royal Academy Exhibition of British art, and covers the period from primitives to the year 1850.

The King's generous contributions to the exhibition include the following:

From Buckingham Palace: Diana and Actaeon (Thomas Gainsborough); Blind Man's Buff, Penny Wedding (Sir David Wilkie).

From Windsor Castle: The Duke and Duchess of Cumberland, the Duchess of Cumberland, Mrs. Robinson, sketch (Thomas Gainsborough); Garrick and his wife (William Hogarth); Queen Victoria Riding Out (Sir Francis Grant); Bathurst, Scott (Sir Thomas Lawrence); Two Corporals and a Private, the Prince of Wales on Horseback (George Stubbs); Lord Spencer Hamilton, (Francis Wheatley); Life Class at the Royal Academy, Queen Charlotte and two sons (Johann Zoffany); Portrait of a Princess, Princess Mary, (John Hoppner).

From Hampton Court Palace: Princess Mary as Diana (Sir Peter Lely).

Urges Precautionary Measures

Experimental Farm Superintendent Speaks On Hopper Menace

South Saskatchewan and parts of Alberta face the possibility of a "25 per cent crop" unless precautions are taken against the grasshopper menace, Roy E. Smith, superintendent of the Gull Lake Experimental Farm, told members of the board of trade at Calgary.

Experimenting With Typhus Germ

The Metchnikov Institute of Moscow announced it had succeeded in cultivating the typhus germ after 35 years of experiments, and expected it to result in elimination of the typhus menace in Russia and other eastern countries. The institute, which said the Rockefeller Foundation was following the experiments closely, is now preparing serums for injection.

Wife: Jimmy gets more like you every day."

Husband: "What thas the little rascal done now?"

Stable Money

Prime Minister Bennett Speaks On Stable Medium Of Exchange

During the years of world depression Canada maintained her reputation of delivering the goods according to the sample, Prime Minister R. B. Bennett told the members of the Dominion Commercial Travellers' Association at their annual banquet at Montreal.

Mr. Bennett spoke briefly, taking as his subject the development of money as legal tender from the days of barter and tokens. The address was non-political.

No one appreciated more keenly than commercial travellers the necessity of having a stable medium of exchange for trade purposes, Mr. Bennett said, after outlining the history of money from the beginning of civilization. The world conference had been prevented from dealing with this problem which he said remained a barrier to complete recovery in world trade conditions.

Mr. Bennett described the functions and need of a central bank in a country such as Canada which gravitated between fifth and sixth place in the world of trading nations, but did not enlarge upon this phase of the legislative program being prepared for the forthcoming session of parliament.

Fifty-six per cent of the business of the country was now being carried on by the use of paper of no intrinsic value beyond the confidence of the recipient in the buyer's promise to pay, the prime minister said. As the credit of an individual depended upon his reputation for redeeming his promises, so did the credit of a country depend upon the manner in which it fulfilled its contracts.

Travel In Comfort

Hardships Of Last Century Unknown To People Today

Travellers by rail in these enlightened days don't know how fortunate they are. All they have to do is buy their tickets, go on board and settle down for a comfortable trip. In the sixties and seventies of the last century it was a vastly different matter, as J. E. Dobbs reveals in the December issue of the Canadian National Railways Magazine. Sometimes, he relates, "passengers would find themselves stalled miles away from a village owing to engine breaking down or snow drifts, and the effort to keep up steam consumed all the cordwood in the engine tender. If no wood supply was readily available the male passengers would be handed axes . . . each would be expected to do his bit by felling and splitting trees. If the patrons of the railroad showed any reluctance in this process of "wooding up," the engineer and fireman would settle down for a nap until such time as the passengers took a more favorable view of the matter. Heavy snow was a serious problem in the days of the woodburners. Sometimes trains would be stuck for days, while fuel for the engines and food for the travelers ran short. The principal snow-fighting equipment consisted of shovels and the strong backs of the male passengers and the crew."—St. Thomas Times-Journal.

Burden Would Be Heavy

Holders Of Farm Mortgages Would Not Welcome Inflation

Inflation has been demanded as a means of relieving the burden of farm indebtedness, but any such form of relief would fall very heavily upon the holders of farm mortgages. Of approximately $3,000,000,000 of farm mortgage debt in the United States retired farmers hold about one billion dollars; other individuals, $2,000,000,000; insurance companies, with millions of policy holders, $2,000,000,000, bank and mortgage companies with a myriad shareholders, $2,000,000,000, and joint stock land banks, also with millions of shareholders, another two billion dollars. It is, moreover, pointed out that postwar inflation in Germany did the farmers no good. They were able to pay off their mortgages in depreciated marks but they were later plunged into bankruptcy when they had to secure working capital at exorbitant rates from frightened lenders. It will thus be seen that wholesale inflation in the German republic ruined both the creditor and the debtor classes and, indeed, almost wiped out in the financial sense that element of the population which used to form the backbone of the nation.—Toronto Mail and Empire.

Russians Play Football

Football at last has invaded Russia. According to reports both men and women are playing soccer. They play it with an intense concentration, never smiling, never enjoying the game, but playing because they think it will benefit posterity. Rotters and cheer leaders evidently would not do much for coming generations, according to the Russians, for there are none in the country.

Cheswick, England, with a population of 65,000 has no movie theatre.

Gifts cost one big British tobacco company $7,500,000 in the last year.

AUSTRALIAN BEAUTY SCORES ON THE SCREEN

A charming study of Gloria Stuart, United Artists star, who plays the part of Princess Sylvia in "Roman Scandals." Miss Stuart is an Australian girl and a typical blonde beauty.

Soviets Take Quarter Crop

But Peasants Allowed to Sell Surplus In Private Market

The Soviet government had been informed that collection of the 1933 grain crop from the peasantry had been completed.

About 20,000,000 to 25,000,000 metric tons were obtained, foreign observers understood, by forced purchase at fixed prices set by the administration. (The metric ton is 2,205 pounds).

The grain, amounting to about 25 per cent of the total production, will be devoted to feeding the urban population and the army, export and reserves.

In his report, addressed to Joseph Stalin, leader of the Communist party, Chairman Chernov of the agricultural section of the council of people's commissars, pointed out that 1933 deliveries were completed from a month to two months ahead of last year when collections were limited by a poor crop. The full quotas had been reached.

Another innovation was to allow the peasants to sell their surplus production to private markets, as contrasted with the former procedure of taking a fixed proportion of whatever was produced.

The price of bread, which still is the principal item of the Russian diet, has decreased considerably recently as a result of the sale of the excess grain.

Chernov called special attention to inauguration of a system of political sections which this year assumed administrative control of every administrative unit.

Testing Mummy Wheat

English Farmer To Find Out Whether It Will Grow

Whether wheat seed 3,000 years old will germinate and "bring forth" is a question which R. Howell, farmer, of South Luffenham, near Stamford, England, had set out to solve.

A friend recently sent him from Egypt a small consignment of wheat grains which had been taken out of a tomb at Sind, where they had lain for at least 3,000 years. He had been given the grain by the principal of the Ummed Purr Agricultural College, to whom the original finder had sent them as a curiosity.

The grain is of the mummy variety. From each head spring peculiar little branches, which render it necessary to plant the seed from nine to 12 inches apart. Mr. Howell is preparing a special plot for the experiment, the result of which will be watched with great interest.

Tablet For Blind Man

In memory of "Blind Fred," a blind man, who every day for more than 40 years used to sit in Hackney churchyard, London, a tablet has been unveiled in the churchyard by the mayor of Hackney. It bears the inscription: "Hereby was seen for many years Blind Fred, a sunny soul."

It isn't likely that Solomon succeeded in convincing all his wives that a word to the wise was sufficient.

Motherwell, Scotland, has a new apartment building for people who must be over 60 years old.

Records Are Interesting

Prehistoric Saskatchewan Was Inhabited By People Of Artistic Ability

Away back in the misty age, scores of millenniums ago, prehistoric man lived and loved in Saskatchewan. Indisputable record that the he-man of all time once disported himself over Saskatchewan's broad acres is found in a remarkable collection of archaeological material in the possession of W. J. Orchard, of Tregarva.

Pots, pans and pipes, knives, hammers, spearheads and chisels all fashioned of stone, make up the more than 400 pieces in the collection, practically all of which were unearthed on the prairies. Each place in the age-old collection carries with it a suggestion of loves and hates, struggles and achievements, when times were bleak and hard indeed.

A Neolithic carved stone pipe, 10,000 years old, has a recognizable lizard head design. A big two-sided piece of sculpture, executed by an artist many thousands of years ago, was unearthed in a ravine three miles from the Orchard home. A large stone, harder than steel, probably took a young cave dweller years to polish. It was found near Indian head.

Shapely little stone arrowheads, less than a finger-nail in length; flattened stone, hollowed out as if for frying purposes, and a piece of rock, chiselled into the image of a tea-cosy, were found in the Mortlach and Regina areas. The father of all the mortar and pestle utensils is a small rock which fits into a larger one and thought to have been fashioned for the manufacture of drinks made from wild fruit.

Mr. Orchard has spent more than 50 years accumulating his exhibits of flintware and pottery which tells a story of prehistoric man in relation to Saskatchewan. He has studied photographs of granite implements in the London and Paris museums and submitted to learned archaeologists drawings and pictures that have come into his possession.

Hoppers In Alberta

Insects Damaged About 11 per cent. Of Crop Last Year

Grasshoppers did about 11 per cent damage to the crops in Alberta last summer, but measures taken to fight them saved 40 per cent, according to information based on reports and estimates by the department of agriculture. An area of 3,625,000 acres owned by 10,900 farmers was affected.

It is expected that there will be another visitation by hoppers next year, with possibly 5,000,000 acres of infested area. While the territory affected will be larger, the infestation will not be so heavy, it is believed, and a campaign of about the same proportion as this year is anticipated. The insects will probably advance northward as far as Alliance and Elnora.

Munitions imported into China in the first nine months of 1933 were greater than those of the same period of the preceding year.

Lake Baikl, in Siberia, is said to be the deepest fresh water lake in the whole world.

The Geneva Disarmament Barber: "Shave, Sir?"
Mars: "No; haircut!" —Strube in the Daily Express.

Made Life Member

Hon. MacKenzie King Is Honored By Canadian Legion

The ex-service men of Canada continued to the enjoyment of the 59th birthday of Rt. Hon. [illegible] King, leader of the Liberal party, when [illegible] of the Canadian Legion, Major John S. Roper, M.C., K.C., Dominion president, presented Mr. King with the gold badge and certificate of honorary life membership in that association. In so doing the Legion consummated the formalities of admission to this restricted group of honorary life members which were initiated on July 23, 1930.

On that date Mr. King, as prime minister of Canada, became the first of that number, and at the same time Rt. Hon. R. B. Bennett then leader of the opposition was also honored in this fashion by the Legion. Mr. Bennett received his credentials in advance by a mail delivery, as [illegible] Major Roper, K.C., was a member of the Parliament of Parliament Hill.

Presenting Mr. King with the badge and certificate, Major Roper recalled that the ceremony synchronized with the Liberal leader's 59th birthday, and, in a way, partook of the character of a birthday party. He tendered his congratulations to Mr. King, voicing the wish that he might have many years before him wherein to render service to his country.

Laurier House, in which the ceremony took place, was redolent of memories, chief among which was that of service to Canada; it recalled vividly a great statesman whom all Canadians had honored and whose memory was revered throughout the length and breadth of the land.

Mr. King assured Major Roper that outside of—and perhaps side by side with—the honors which the Canadian people had conferred on him first by appointing him leader of a great party and then by electing him prime minister of Canada, he could conceive of none more worthy to be cherished than that of being admitted to that fraternity of ex-service men who, in the hour of their country's need, had offered their lives for Canada. He assured the Dominion officers and through them the war veterans of this country as a whole that he would continue to keep their welfare and their interests close at heart.

New Planes Comfortable

Flying Boats For Mediterranean Service Are Greatly Admired

Comfort has received considerable attention in the later built big passenger planes. Staff accommodation in the new "Perth" class flying boats in the Mediterranean service, has earned many admiring comments.

Amidships, for example, is the officers' quarters or wardroom. This is equipped with a hinged pneumatic settee berth on either side, which forms seats by day, or can be folded up to give ample floor space. Each settee is fitted with lockers and could be used as a raft in emergency. Behind the berths are lockers for kit and canteens for food and crockery.

A detachable hanging mahogany table with metal tubular supports is slung from the frames overhead when needed; when not in use it can be stored away under the starboard berth.

The wardroom is insulated against excessive noise. Hinged electric fans at the side ports provide ventilation when the port is anchored. There is plenty of room; wheel decks and table are stowed away the clear space measures seven feet in length and breadth and six feet in height. At the rear of the room is the engineer's station, equipped with oil and water thermometers, oil pressure gauges, watch and radiator shutter controls. Dividing the wardroom from the men's quarters is a watertight bulkhead, fitted with a swing door.

Saskatchewan Wheat Pool

Mr. L. C. Brouillette To Head Pool For Another Year

L. C. Brouillette will head the Saskatchewan Wheat Pool another year, it was decided at a meeting of the newly elected board of directors at Regina.

All the old officers, executive and representatives to the Central Board were re-elected as follows:

Vice-President: J. H. Wesson, Maidstone; executive: Brooks Catton, Hanley; A. F. Sproule, La Fleche; and Leonard Widdup, Kipling; representatives to the Central Board; L. C. Brouillette, J. H. Wesson and Brooks Catton.

Fifteen of the 16 returning directors were re-elected, the only new member of the board being A. D. Young, Cymric, representing district No. 9.

Something New For Danes

When the Gordon Highlanders with their swinging kilts and bagpipes and drums, arrived in Copenhagen, Denmark, for the opening of the British exhibition, they attracted nearly as much attention as the Prince of Wales who opened the show. The Danes had never seen men in kilts except on the films, and the novelty aroused great interest.

Advice to a Canadian about to visit the States: Don't take any American money.

New Tax Regulations

Saskatchewan Minister Is Given the Power to Determine Income Tax Payable

Providing that where it is impossible to obtain the information required to ascertain the income without the province of Saskatchewan, the minister may, through the lieutenant-governor-in-council, fix or determine the tax to be paid, new regulations governing the collection of income taxes within and without the province of Saskatchewan has been provided for by order-in-council.

This provision, it is stated, is necessary in view of the fact that some corporations or joint stock companies operating in Saskatchewan in addition to other provinces, in some instances have not a system of accounting which definitely fixes by provinces the actual income from their transactions.

In the case of interest, dividends, rents and royalties, however, shall be separately determined, "as their proportionate share of deductions."

The remainder of the income of the taxpayer liable to taxation shall be taken to be such percentage of the remainder of the income as the sales within the province bear to the total sales.

These new regulations for determining the income tax assessment, extraordinary corporations shall not be applied in cases where the method or system of accounting used by the corporation enables the income tax commissioner to determine the actual income derived from the business actually transacted within the province.

Public Opinion Rules

Even Governments Cannot Long Disregard Settled Adverse Opinion.

The world is coming more and more to be governed by public opinion, states Newton D. Baker, of Cleveland. Even in governments where that does not seem to be true, in the last analysis no rule or system of rule is strong enough long to disregard a settled adverse public opinion.

Public opinion seems to be the result of two forces. One is the accuracy of knowledge and the other is character and when you know how much knowledge a man has and how much character he has you can predict the result of those two things and forecast his course of action. And so it seems to be about nations.

The only hope of continued where adult knowledge is a factor is public opinion, is a continuous process of education.

Radio Air

Is Found to Contain One-Third More Radio-Active Material Than In Daytime.

A new discovery about the night air that grandmother used to think so unhealthful, showing that people who breathe it take into their systems one-third more radio-active matter than in the daytime, was explained by Carnegie Institution scientists.

In large enough amounts, radio-active material in the body can be very harmful, as illustrated by people who drank "radium water" and wetted brushes full of radium paint with their lips to paint watch dials.

Numberless Numbers

Some Remarkable Figures In Connection With Counting Molecules

If we try to count the number of molecules contained in one cubic millimetre of hydrogen gas, first arranging them in groups of a billion each, it would take a thousand years to count these groups. In a drop of water there are about 2,000,000,000,000,000,000,000 molecules. If one of these molecules were magnified till it appeared twenty feet in diameter, the atoms of which it is composed would look like floating specks of dust, and each atom is like a solar system.

Would Tag Offenders

The government should take stronger measures and deal with the careless motorist in such a way as to bring home to him his responsibility. Fines and jail sentences seem to have no effect in reducing reckless driving. This paper again suggests that a red tag be ordered attached to every car driven by a motorist who has been fined.—Sault Daily Star.

Claimed First Flight

Earl Jatho, who claimed to have been the first man to fly, died a few weeks ago in Hanover, Germany, at the age of 60. He declared that he beat the Wright brothers into the air by three months, by flying his own home-made motored plane on August 18, 1908.

Scotland is complaining that onions are being dumped into the country.

Income taxes on salaries have been increased by Peru.

Sometimes when the radio is on static is a relief.

Work Of Charting Positions Of Planets To Aid Navigators Is Planned Five Years Ahead

The superintendent of the Nautical Almanac Office, at Greenwich, England, has to think five years ahead. He is now preparing his almanac for 1938.

The superintendent is Dr. L. J. Comrie, who charts the positions of the moon and stars to aid navigators on sea and in the air throughout the world. He has already worked out the positions of the moon twice a day up to the year 2,000.

The Nautical Almanac is the seaman's Bible. The navigator wishing to determine his position must know three things:

1. Greenwich mean time (obtained from a clock which is checked by wireless);

2. The altitude of the sun or some other heavenly body (obtained by sextant); and

3. The celestial position of that body.

The Nautical Almanac provides the latter information. No ship could be navigated without it, and on the accuracy of its figures the safety of all shipping depends.

The reason why Dr. Comrie habitually thinks and works five years ahead is that several other nations co-operate with Greenwich in collecting the information given in the almanac, and without his predictions of the day-to-day portions of the sun, moon and stars, they could not get on with their part of the work.

In recent years the methods of the department have been revolutionized by the introduction of accounting machines.

"Up to 1926," Dr. Comrie says, "practically all the computing was done by hand. Highly skilled computers, who lived on seven-figure logarithms, were the order of the day. Today no logarithms are used. The machines do it all, even to the checking of their own figures."

In a large room young girls sit at machines juggling easily with enormous figures concerning the positions of heavenly bodies.

How old seven-figure logarithm experts would have stared at their young successors. The girls know nothing about astronomy or "right ascension"—even not need to.

The thing that matters is that one of the machines in the course of a year calculates and prints 1,200,000 "function values" involving about 30,000,000 figures. It would take a copyist, working ordinary office hours, seven years merely to copy these figures, without any calculation.

And that job, already mentioned, of predicting the position of the moon up to the year 2000, which, done by hand, would have cost $30,000, was accomplished for less than $7,500 by means of another machine.

Next year marks a centenary at the Nautical Almanac Office, for although the first almanac was produced in 1766, it was the 1834 publication which become the model of all subsequent issues.

Ancient And Modern Speed

Emperor Tiberius Able To Make 200 Miles In A Day

Mr. Scott-Paine's statement that ship speed has remained almost stationary for the past 25 years, reminds a correspondent of the interesting fact that the Romans held the land speed record right through the centuries until the invention of railways. The record was set up by the Emperor Tiberius, who in a dash through Rhaetia and Germany to Lyons to see his dying brother, Drusus, achieved a speed of 200 miles a day by using relays of chariots. Even in 1834 we could not travel faster than the Romans. Sir Robert Peel was in Rome in November of that year when the news arrived that he had been appointed Prime Minister. He immediately set out for London, travelling, we are told, "regardless of expense," but the journey took him thirteen days to accomplish—which was exactly the time taken by high Roman officials when sent from Rome to Britain during the "occupation."

New Solution Produced

Artificial Blood Has Been Used For Transfusion Purposes

"Artificial blood" is the latest medical invention.

A chemical solution of all salts contained in human blood, without its albumen, has been produced by the well-known chemist, Prof. E Weichard, and tested by the surgeon, Prof. J. G. Knoflach, in the Vienna surgical clinic.

Sixty-two patients who would ordinarily have required blood transfusions as a result of knife or bullet wounds and other serious injuries were given this artificial solution with excellent healing and even life-saving results.

Rice factories in the Irish Free State are employing more people than in 1929.

Aircraft imports into China are increasing.

Not Recent Innovation

Canadian Farmers Have Been Practising Co-operation Since 1885

Co-operation among farmers is by no means a recent innovation in Canada. There is a co-operative dairy in Prince Edward Island, the Stanley Bridge Dairying Company, which has been in active business since 1885. For the past forty-eight years this company has been manufacturing cheese and butter, and conducting a business on the co-operative plan. In the same province five years later, the Hamilton Cheese Factory, which is affiliated with the Kensington Dairying association, commenced business, and by 1900 there were 11 co-operative dairy factories on the Island serving their farmer patrons. Coincident with this development, or shortly after, co-operative dairies were established in other provinces, and are now performing a useful service for farmers throughout the Dominion. There were 113 co-operative dairy organizations in Canada in Canada in 1932, the largest being the Saskatchewan Co-operative Creameries with a membership of 39,000. Manitoba Co-operative Dairies and the Alberta Milk Pool are large organizations in this field, each with a membership over 6,000.

Challenge Was Accepted

Workers Made Girl's Jumper Out of Bishop's Gaiters

A bishop whose gaiters were zip fastened because he was too lazy to use buttons was referred to by the Marchioness of Reading at a meeting of the Personal Service League in Manchester.

She said the bishop sent an old pair of gaiters to the league and challenged the workers to make something out of them. "We took the gaiters and make a little girl's jumper with a zip fastener down the front," she added.

Civilization's Only Hope

Much Depends On Anglo-Saxon Race States R. D. Blumenfeld

Civilization will only be saved by the moral power of a vast aggregation of people which is growing stronger—the two branches of the Anglo-Saxon race. This is the contention of R. D. Blumenfeld, dean of Fleet Street, former editor and now chairman of the Board of Directors of the Daily Express, as he surveys the world from "an editor's uneasy chair," and listens on his wireless set to "the warfare of Europe, a deadly warfare, a precursor of the destruction of civilization." Members of the Pleiades Club in Toronto shared with him his vantage point in observing the signs of today in this "struggle for war or for peace."

He described a Europe uneasy and apprehensive; the "rasping drill-master voice" of Herr Hitler rising to a pitch of frenzy as he rattles the sword to the German people the while he offers the olive branch to the world; a France frightened and worried into arming and not disarming; little Switzerland only wanting to keep open its hotels and make cheese; Mussolini "an intellirent dictator—but a dictator, nevertheless"—waiting to step in at the psychological moment demanding his share of the international swag; the woes of the reconstituted Poland, "an infant of the Treaty of Versailles and a very unhappy one," and the voices of "those new friends of the United States of America—the Russians."

The obvious remedy for the present world situation would be the application of the League of Nations, but he thinks "the League has faded," and Mr. Blumenfeld sees in the Anglo-Saxon people the one salvation for civilization. These total 200,000,000 and inhabit a third of the world.

Of Great Britain today he remarked with a smile that "English people discovered they could pull themselves up by their own bootstraps," that every month trade was better, that depression was not a subject of conversation and the dole had become a social degradation."

Receives First Auto

Mechanical Vehicle Never Before Seen on Seal Island

History was made on Seal Island, graveyard of many a fine ship, when an old car was loaded on to Hilton Nickerson's motor boat at Yarmouth Nova Scotia, and transported 25 miles to the island.

The car, owned by Herbert Moore, wireless operator at the government station there, could not be landed directly on account of heavy seas, so was loaded on to two dories, a set of wheels in each, and carried to shore. The owner then drove, for the first time since creation, a mechanical vehicle over the rough ash roads.

Seal Island is about four or five miles long and less than two miles wide. About 20 families live there, many of them fishermen. Wireless operators sign on for several years and Mr. Moore decided the comforts of the outside world should be his. Not only has he brought a car, but he has acquired several other modern mechanical aids never before seen on the island.

Equinoctial Storms

Idea Regarding Them Goes Back Nearly 200 Years

The belief that a violent storm is to be expected when the sun crosses the equator about September 22 goes back at least to 1748, and is held both in England and the United States. Its origin is not known, but it may have been coined by sailors from experience of the West Indian hurricanes, which are especially frequent about this date. Statistics of gale frequency show that in England there is no especial tendency for storms to occur near the autumnal equinox; on the contrary, they increase steadily in frequency from summer until mid-winter. The autumnal equinox may, however, be regarded as the conventional beginning of the winter or stormy season. The belief in an equinoctial gale is sometimes extended to the spring equinox, March 21, but for this there is no basis at all.

Proved His Point

"Patience and perseverance will accomplish all things," said a passenger in a railway compartment.

"Nonsense, sir!" said a fellow-passenger. "Will patience and perseverance enable you to carry water in a sieve?"

"Certainly!!"

"I would like to know how!"

"Simply by waiting patiently for the water to freeze."

Butcher—I can't give you further credit; your bill is bigger than it should be.

Man—I know that. Just make it out for what it should be, and I'll pay it.

You can guess at a man's income. The higher it is, the less his wife does for him.

Business failures in Italy are fewer than a year ago.

Austria now has less than 280,000 registered unemployed.

MONUMENT TO ASSASSINATED PRESIDENT

Above is a picture of the monument which is to be erected in memory of President Doumer of France, who was assassinated in May 1932. A competition was held recently among the best known artists and sculptors with a view to selecting a monument symbolizing Paul Doumer's character. M. Armand Martial, sculptor, and M. Labro, architect, designed the winning model which is to be erected in Doumer's native town of Aurillac.

Egg Production Tests

Mixed Protein Ration Best For Birds Over Two Years

Tests to determine the most economical ration for the production of eggs at the Harper Adams Agricultural College, England, resulted in no material advantage in using fish meal instead of meat-and bone meal, dried buttermilk, or peanut meal instead of soybean meal during the pullet year. In this year, the best egg production and margin over feed costs was obtained through the use of a combination of meat-and-bone meal, dried skim-milk, and soybean meal. The results in the second year were essentially the same as in the pullet year. Hatchability was not materially affected by the various rations. For birds over two years, it was found that a mixed protein ration gave better results than a simple protein ration in production, economic returns, fertility and hatchability. The birds were single-comb White Leghorns.

Our National Credit

Britain Has Won Confidence In Security Of Pound

The Jeremiahs would no doubt attribute our favorable position to good luck rather than to good guidance. But luck plays no part in such matters. The improvement that is taking place in British trade and in the trade of those other countries which have had the hardihood to link themselves to our currency is due to one circumstance, namely, the restoration of complete confidence in the security of the British pound. Confidence does not arrive—it must be won. By pursuing a quiet, but consistent monetary policy the Chancellor of the Exchequer, in co-operation with the financial authorities has recovered the whole of our prestige, and in its train has come trade improvement.—Glasgow Herald.

Predicts Arctic Air Route

Vilhalmur Stefansson, noted Arctic explorer, predicts that before 1945 one of the busiest routes to Europe will be across the Arctic wastes. Addressing University of Delaware students, he said the sanest places for aeroplanes are the tropics and the Arctic, and that the Arctic has the advantage of being the shortest air route across the Atlantic.

Inquiring Friend—Why must a judge look so impassive?

His Honor—If you show any signs of interest in a lawyer's argument he'll never stop.

An Interesting Discovery

Canadian Red Cedar Contains Concentrates Fatal To Fungi

Wood which destroys some of the most deadly pests to which timber is subject has been discovered at the Forest Product Research Laboratory in Princes Risborough, England, where a series of tests upon various Empire timbers is now in progress. Experts placed small blocks of Canadian red cedar in contact with actively growing cultures of various wood-destroying fungi under conditions specially designed to promote infection—and after eight months the fungus was dead and the timber as healthy as ever. Similar tests were carried out with blocks of Baltic timber, and in a short time it was completely rotted and had lost nearly a third of its weight. The experts were not content with one test. They laid boards of Canadian cedar between the boards of a floor which had already been rotted with dry fungus—and after six months the Dominion boards were completely unaffected. It appears that the cedar contains concentrates which are fatal to fungi.

Relief Work

Plans Being Laid For Program Of Works In Saskatchewan Next Spring

Comment by Premier Anderson of Saskatchewan, that should the Kenosee Chalet, recently destroyed by fire be rebuilt, the work would be undertaken as part of a program of works under a national plan, has revived hope that the program proposed some weeks ago by Premier Bennett will commence next spring.

The works program, if undertaken, Dr. Anderson said, would also include for Saskatchewan the further development of roads and erection of bridges.

Careful Storing Of Seed

Proper Care Necessary To Keep It Strong And Vigorous

On the viability, that is the life, of the seed depends to a great extent the crop that will grow when the seed is planted. Good varieties, freedom from weeds and disease should also be taken into account. If the seed is strong and healthy when collected and it gets proper care during the winter it will stay strong and vigorous. Seed should not be allowed to get moist on warm wet days, nor to freeze. Seed can be stored in an attic or dry basement or seed house where the temperature remains at a reasonable height.

PREHISTORIC WIFE: "Oh, I should love that skin! Go on, darling, I don't want much—half a yard would do."—The Humorist, London.

Some Realities About The Wheat Situation And Necessity For Curtailment Of Production

Exercise And The Heart

Strenuous Exertion For People After Middle Age Invites Trouble

The increase in deaths from heart diseases as revealed by the medical director of an American life insurance company should not be passed over lightly. From a study of 51 leading insurance concerns he finds that the death rate from organic diseases of the heart will be 159.1 per 100,000 policy holders during 1933. Last year the rate was 149.9.

Possibly the worry and strain brought about by the depression may have something to do with it, although this medical director attributes increased heart ailments in part "to the successful saving of the younger life over a period of years, so that more people reach the ages when degenerative diseases are more prevalent."

Dr. John A. Oill, of Toronto writing in "Health," deals particularly with exercise and the heart. This question is of considerable importance, because there have been numerous cases when people dropped off suddenly while engaged in strenuous play or work. Dr. Oille states: "Physical strain has nothing to do with causing heart disease. Exercise, however, reveals or may reveal it, i.e., it may show that it is present.

He goes on to say: "There are certain people who are foolish about their exercise. They make it a matter of pride that at sixty they can do as much as most people can do at thirty and think that strenuous exertion keeps them fit and defeats the inroads of age. They are inviting trouble."

It is evident that such individuals cannot control their exercise. They allow it to control them. And in the end they pay dearly for their fallacy.

Queer Reptile In London Zoo

Snake Fascinates Victims By Making Faces At Them

The belief in the hypnotic power of the serpent's eye is now generally discredited, but the London Zoo has just received from Martaban, in the Malay Peninsula, a tree snake which fascinates its victims into a state of helplessness by making faces at them. The tongue carries the same markings as the long pointed head, and when thrust in and out rapidly, the whole head looks like a diabolically animated telescope. A small bird or lizard suddenly confronted with this display is so aghast that it remains as though turned to stone, and only "comes-to" when the snake has it safe in its coils. The reptile also has a habit of anchoring itself in a branch by the tip of its tail, and suddenly flicking its yard-long body, like a living whiplash, at its victim. It is extremely savage, but its poison fangs cannot inflict a wound much more severe than a wasp sting. The natives call the snake "Eye Poker," from its habit of always striking at the eyes of any human being approaching it.

Feud Has Been Settled

Quarters Provided By Australian Postal Department Satisfy Magpies

Australian magpies and the governmental postal department have settled their long feud.

For many years the birds have insisted upon building their nests between telegraph wires of the postal system, causing frequent short circuits and broken lines. Weary of attempting to exterminate all the magpies in Australia, a linesman recently built an artificial nest and placed it on the cross-arm of a telegraph pole.

A pair of magpies promptly "moved in." As a result of the successful experiment, the postal system is having artificial magpie nests placed at hundreds of points where they will cause no interruption in telegraph service.

So far the postal system has found no solution to the problem of how to deal with galahs which alight in numbers on the wires. Their weight causes these to make contact with wires beneath, disrupting telegraph service.

Stream-Lined Pedestrians

Stream-lined automobiles, stream-lined airplanes and stream-lined trains are beginning to make their appearance on the market. Pretty soon pedestrians will have to grow stream lines in order to escape at all says the Lethbridge Herald.

"Oh, General," gushed the sweet young girl to the army officer who was sitting next to her, "are you fond of music?"

"Oh, yes," said the gruff officer, "I like most any kind of noise."

Britain's post office savings bank has 1,000,000 more depositors than in 1912.

London's new power station at Battersea will require 2,000 tons of coal a day.

Accustomed to think of Canada as the "granary of the world," many of us must have been shocked by a recent cable telling that this year Italy will produce 297,000,000 bushels of wheat. For that is exactly 26,000,000 bushels more than Canada's production in 1933. Our total 1933 yield, according to the estimate of the Dominion Bureau of Statistics, was 271,821,000 bushels.

This, with some allied facts, puts a different complexion upon the plan limiting our wheat, exports to 200,000,000 bushels a year, this necessitating acreage curtailment.

For Italy is not alone among European countries in increasing wheat production. England is growing more wheat, and France and Germany, and all of the Danubian countries. As they grow more they import less.

In the case of Italy, Mussolini's "battle of wheat" has increased Italy's average production of 187,000,000 bushels eight years ago to 297,000,000 bushels, with an average yield over the past eight years of 242,000,000. As a consequence, Italy has prohibited all wheat imports. A market which took 12,000,000 bushels of our wheat in 1931 and 4,000,000 bushels in 1932 becomes a total loss.

In the circumstances and seeing that other European countries have been following the lead of Italy, little sense would seem to exist in the proposition that we go on sowing and producing wheat as though nothing new had developed. This year, through an act of God, our wheat yield was curtailed without the need of quotas. But on the preceding five years our wheat production was:

1928	566,000,000 bush.
1929	304,000,000 bush.
1930	420,000,000 bush.
1931	321,000,000 bush.
1932	450,000,000 bush.

If, this year, there had been no wheat crop failure, but a yield of, say, 450,000,000 bushels, how and to whom would we sell it? Or, in the event of refusing to be bound by a quota where or how would we be able to sell 450,000,000 bushels next year? The export surplus?

This is a reality which Canada has got to face. Restricting our wheat acreage after all that has been said about the West, and all that has been hoped for it may look like a retreat, like a disaster. It can't be much more of a disaster than the growing of hundreds of millions of bushels of wheat, only to sell them below cost of production, or to let them rot on the prairies.

Therefore, while no one has yet come forward to explain just how wheat acreage is to be curtailed—how the curtailment is to work out in the case of the average farmer and what to be substituted—the thing has got to be achieved in some manner. To do otherwise, to refuse to give the quota system a trial, going on producing wheat regardless of changed world conditions, and without a care as to where or how it may be sold, or at what price, might turn out to be a costly folly.—Ottawa Journal.

Runs In The Family

Man, Son, and Daughter All Hold Rescue Medals

Three members of the family of Thomas Ferns, Pawtucket, Rhode Island, have received medals for heroism in rescuing persons from drowning.

The latest award went to his daughter, Mary A., 17, who received the gold medal of the Massachusetts Humane Society for rescuing Norton Sutton, 10, from drowning.

Her father was decorated with the first medal of the society in 1902 when he saved Agnes Cusick, 14, from a flood torrent.

Thomas Ferns, Jr., possesses two medals. At the age of 15 he nearly lost his life saving that of Philip Jenelle.

Three boys owe their lives to the elder Ferns and another son, Albert.

To Span Firth Of Forth

Lord Bruce, son and heir of the Earl of Elgin, recently cut the first sod for the construction of a road bridge costing $1,500,000 to span the Firth-of-Forth at Kincardine. The earl presented a new half-crown—equivalent of 60 cents—to each of the 15 laborers who immediately started preliminary excavations.

DAUGHTER RELEASED ON MURDER CHARGE

EDMONTON, Jan. 6—With her confession of cutting her father's throat reported made in an effort to shield her mother and brother, cast aside by the police officials, Alice Fusty, 18, was released late Friday by R.C.M.P. officers from a charge of slaying her father, Fred Fusty, at their farm home near Oliver on Dec. 24.

The mother, Lillian, 45, and brother William 24, are still held on charges of slaying Fusty.

Release of the girl came after an inquest Friday afternoon in which Annie Fusty, 16, told of seeing her mother batter her father on the head with an iron bar, and of seeing William pick up the bar and aim another blow at the father as he lay on the bed.

Annie declared that after the slaying a family conference was held to see who would take the blame.

"I'll take the blame," she quoted her mother as saying.

"But I hit him once, too," the son said, according to her story.

"Forget about it! I'll take all the blame," the mother responded, she said.

Coupled with the girl's testimony was evidence by Dr. McGregor, assistant pathologist at the University of Alberta, that Fusty died from an extensive skull fracture, as a result of the blows, and that his throat was cut after death occurred. The throat injury, he said, "had nothing to do with it."

The coroner's jury returned a formal verdict that Fusty died as a result of the blows, and did not fix responsibility.

THE CHURCH OF ENGLAND IN CANADA
St. Cyprian's Church, Lacombe
Rector: The Rev. T. H. Chapman
Telephone 165

Thursday, 8 p.m. A Special Joint Service will be held in observance of the "Week of United Prayer."

Friday—Regular weekly meeting of the Junior W.A.

Jan. 14, 2nd Sunday after Epiphany

10:00 a.m. Sunday School.

11:00 a.m. Morning Prayer and Sermon.

7:30 p.m. Evensong and Sermon.

TO be KEPT IN MIND: The Third annual Boy's Vocational Conference under the auspices of the Anglican Church in the Rural Deanery of Red Deer, will be held at Red Deer on Saturday and Sunday, January 27-28, 1934. All Anglican teen age boys are eligible for attendance. The only cost to them (apart from transportation to and from Red Deer) would be the Registration Fee of 25c. Please plan NOW to attend this Conference and let the Rector know of your intention at ONCE.

IN MEMORIAM

In loving memory of Margaret DeGear who passed away Jan. 10, 1932.

There is a sad but sweet remembrance
There is a memory fond and true.
There is a token of affection Mother,
And a heartache still for you.
Ever remembered by Laura and Nellie
